

CONTENTS

PREFACE	v
1. INTRODUCTION	1
Definitions	1
Factors Controlling the Properties of Clay Materials	3
Clay-mineral composition. Nonclay-mineral composition. Organic material. Exchangeable ions and soluble salts. Texture	
2. CONCEPTS OF THE COMPOSITION OF CLAY MATERIALS	11
Old Concepts	11
Clay-mineral Concept	16
3. CLASSIFICATION AND NOMENCLATURE OF THE CLAY MINERALS	27
Classification of the Clay Minerals	27
Nomenclature of the Clay Minerals	29
Questionable and Discredited Clay Minerals	38
4. STRUCTURE OF THE CLAY MINERALS	43
General Statement	43
Allophane Minerals	45
Kaolinite Minerals	46
Halloysite Minerals	52
Montmorillonite Minerals	55
Illite Minerals	65
Chlorite Minerals	69
Vermiculite	72
Sepiolite, Palygorskite, Attapulgite Minerals	77
Mixed-layer Minerals	79
5. X-RAY DIFFRACTION DATA	84
General Statement	84
Kaolinite and Halloysite Minerals	87
Montmorillonite Minerals	91
Illite Minerals	93
Chlorite Minerals	97
Vermiculite Minerals	99
Sepiolite, Palygorskite, Attapulgite Minerals	99
Mixed-layer structures	102
6. SHAPE AND SIZE—ELECTRON MICROGRAPHS	106
General Statement	106
Data for the Clay Minerals	108
Allophane. Kaolinite. Dickite. Nacrite. Halloysite. Montmorillonite. Illite. Vermiculite and chlorite. Attapulgite-sepiolite-palygorskite. Mixed-layer minerals	

7. ION EXCHANGE	126
Importance of Ion Exchange	126
Cation Exchange	128
History. Cation-exchange capacity. Other minerals with cation-exchange capacity. Causes of cation exchange. Position of exchangeable cations. Rate of the exchange reaction. Variations due to particle size. Effect of grinding. Relation of temperature. Environment of the exchange reaction. Hydrogen clays. Clogging of cation-exchange positions. Replaceability of exchangeable cations. Fixation of cations. Theory of cation exchange. Determination of cation-exchange capacity and exchangeable cations	
Anion Exchange	156
Phosphate fixation	
8. CLAY-WATER SYSTEM	161
Nature of Adsorbed Water	162
Density of Initially Adsorbed Water	171
Evidence for the Crystalline State of the Initially Adsorbed Water	171
Thickness of Adsorbed Nonliquid Water.	174
Time Factor	175
Influence of Cations and Anions	175
Stepwise Hydration of Montmorillonite	181
Stability of Montmorillonite Hydration	182
Influence of Adsorbed Organic Molecules	183
Heat of Wetting.	183
Values for heat of wetting. Causes of heat of wetting. Heat of wetting in solutions of electrolytes. Effect of firing	
9. DEHYDRATION, REHYDRATION, AND CHANGES TAKING PLACE ON HEATING	190
Methods of Study	190
Vapor pressure-water content determinations. Dehydration curves. Differential thermal analyses. Identification of high temperature phases	
Allophane	211
Kaolinite	212
Dehydration and phase changes on heating. Rehydration	
Halloysite	217
Dehydration and phase changes on heating. Rehydration	
Montmorillonite	220
Dehydration and phase changes on heating. Rehydration	
Vermiculite	231
Dehydration and phase changes on heating. Rehydration	
Illite	233
Dehydration and phase changes on heating. Rehydration	
Chlorite	238
Dehydration and phase changes on heating. Rehydration	
Sepiolite, Palygorskite, Attapulgite	241
Dehydration and phase changes on heating. Rehydration	
Clay-mineral Mixtures	245
10. CLAY-MINERAL—ORGANIC REACTIONS	250
Introduction	250

Contents

xi

Reactions with Montmorillonite and Halloysite	252
Ionic reactions. Adsorption of polar molecules. Comparison of ionic and polar complexes	
Reactions with Clay Minerals Other Than Montmorillonite and Halloysite	262
Kaolinite. Illite. Chlorite. Vermiculite. Attapulgite	
Resistance of Adsorbed Organic Molecules to Biological Decomposition. Organophilic Clay-mineral Complexes	264
Structural Implications of Montmorillonite-Organic Complexes	269
Analytical Technique Based on Clay-mineral-Organic Reactions.	271
X-ray techniques. Differential thermal techniques. Optical methods. Cation-exchange capacity. Surface-area determination. Geometry and properties of organic molecules	
Staining Tests for Clay Minerals	274
11. OPTICAL PROPERTIES	278
Kaolinite	278
Halloysite	280
Montmorillonite.	282
Illite	284
Chlorite	284
Vermiculite	285
Sepiolite, Attapulgite, Palygorskite	285
Influence of Immersion Media on Optical Properties	286
Oriented-aggregate Technique.	288
Interlayer Mixtures.	289
Orientation in an Electrical Field.	290
Form Birefringence	291
Discussion of the Application of Optical Methods in Clay-mineral Studies	292
12. MISCELLANEOUS PROPERTIES	295
Solubility of the Clay Minerals	295
General statement. Solubility of clay minerals in acids. Nature of the acid reaction. Decomposition by electro dialysis. Cation liberation by neutral salts. Rational analysis. Solubility of clay minerals in alkalies	
Infrared Spectra of the Clay Minerals	303
General statement. Data for the clay minerals	
Surface Area	308
Density	312
Kaolinite. Halloysite. Illite. Montmorillonite. Vermiculite. Chlorite. Sepiolite, attapulgite, palygorskite	
13. ORIGIN AND OCCURRENCE OF THE CLAY MINERALS	316
Synthesis of the Clay Minerals	316
Introduction. Syntheses from mixtures of oxides and hydroxides at elevated temperatures and pressures. Syntheses from mixtures of crystalline minerals and chemical reagents at elevated temperatures and pressures. Syntheses from mixtures of oxides and hydroxides at ordinary temperatures and pressures. Transformations of clay minerals at ordinary temperatures and pressures. General conclusions from synthesis data	

Clay Minerals of Hydrothermal Origin	323
Introduction. Types of clay minerals in hydrothermal deposits. Mode of formation and occurrence. Nature of the hydrothermal solutions. Relation to parent materials. Relation to mineraliza- tion. Clay minerals associated with hot springs, fumaroles, etc.	
Soils and Weathering	330
Factors controlling weathering processes. Soil-profile develop- ment. Classification of great soil groups of the world. Descrip- tion of great soil groups. Tundra soils. Podsollic soils. Laterite soils. Zonal aridic soils. Clay-mineral composition of soils. Discussion of weathering products formed from various types of rock under varying conditions. Reversion of weathering cycle. Occurrence of halloysite and allophane in soils. Nature of the alteration process	
14. ORIGIN AND OCCURRENCE OF THE CLAY MINERALS (CONT.)	348
Recent Sediments	348
Marine environment. Nonmarine conditions	
Ancient Sediments	355
Clay-mineral composition in relation to mode of origin. Clay minerals in relation to geologic age. Clay minerals in relation to lithology. Miscellaneous clay materials	
APPENDIX	369
Chemical Analyses	369
INDEX	375
