

CONTENTS

<i>Chapter</i>		<i>Page</i>
I.	Thermal Methods	1
	<i>By R. C. MACKENZIE</i>	
	Historical review, 3; thermal methods available, 6; limitations of differential thermal analysis, 15; applicability of differential thermal analysis, 19; possible future development, 20; references, 20.	
II.	Apparatus and Technique for Differential Thermal Analysis	23
	<i>By R. C. MACKENZIE and B. D. MITCHELL</i>	
	General considerations. 23; components of apparatus, 24; representative types of apparatus, 39; technique. 48; interpretation of results, 56; correlation of results, 58; references, 60.	
III.	Theory and Quantitative Use	65
	<i>By E. C. SEWELL and D. B. HONEYBORNE</i>	
	Base-line and peak area, 66; limitations of mathematical model, 73; numerical results, 76; experimental, 81; unusual methods for quantitative interpretation of differential thermal curves, 86; shape, height and position of peaks, 89; practical conclusions, 94; references, 95.	
IV.	The Kaolin Minerals (Kandites)	98
	<i>By D. A. HOLDRIDGE and F. VAUGHAN</i>	
	Historical, 99; structure, 101; differential thermal criteria, 102; reaction kinetics in relation to the differential thermal analysis of kandites, 113; modification of differential thermal peaks, 116; differential thermal curves for kandites, 122; ball clays and fireclays, 130; quantitative estimation, 132; summary, 134; references, 135.	
V.	The Montmorillonite Minerals (Smectites)	140
	<i>By R. GREENE-KELLY</i>	
	Technique, 142; the smectite differential thermal curve, 143; differential thermal analysis of smectite-organic complexes, 157; identification and estimation of smectites, 160; references. 162.	

<i>Chapter</i>	<i>Page</i>
VI. The Mica Minerals	165
By M. MUÑOZ TABOADELA and V. ALEIXANDRE FERRANDIS	
Classification of true micas, 166; classification of clay micas, 169; effect of heat on clay micas and related minerals, 176; differential thermal curves, 181; dehydration curves, 184; analysis of mixtures containing micas, 186; summary, 187; references, 188.	
VII. The Vermiculite Minerals	191
By G. F. WALKER and W. F. COLE	
The chemical formula of vermiculite, 191; the low-temperature peak system: 0-350°C, 192; the central region of the curve: 350-700°C, 200; the high-temperature peak system: 700-1,000°C, 202; batavite, 203; discussion, 204; references, 206.	
VIII. The Chlorite and Serpentine Minerals	207
By S. CAILLÈRE and S. HÉNIN	
I. <i>The Chlorite Minerals</i> : Structure, 207; thermobalance curves, 209; differential thermal curves, 211; interpretation of the curve, 215; conclusions and summary, 218.	
II. <i>The Serpentine and Related Minerals</i> : Structure, 220; thermobalance curves, 221; differential thermal curves, 221; interpretation of the curve, 223; variability of the differential thermal curve, 224; summary, 228; references, 229.	
IX. The Sepiolite and Palygorskite Minerals	231
By S. CAILLÈRE and S. HÉNIN	
I. <i>The Sepiolite Minerals</i> : Chemical composition, 231; thermobalance curves, 233; differential thermal curves, 234; interpretation of the curve, 236; experimental variation of the differential thermal curve, 237; summary, 238.	
II. <i>The Palygorskite Minerals</i> : Structure and chemical composition, 239; differential thermal curves, 240; interpretation of the curve, 242; experimental variation of the differential thermal curve, 243; summary, 245; references, 247	
X. Clay Mineral Mixtures and Interstratified Minerals	248
By W. F. COLE and J. S. HOSKING	
Artificial mixtures, 250; natural materials, 256; conclusions, 271; references, 272.	
XI. The Silica Minerals	275
By R. W. GRIMSHAW and A. L. ROBERTS	
Thermal inversions, 275; techniques, 278; detection of quartz, 280; quantitative determination of quartz, 281; conclusions for quartz, 287; cristobalite and tridymite, 288; general conclusions, 297; references, 297.	

<i>Chapter</i>	<i>Page</i>
XII. The Oxides of Iron, Aluminium and Manganese	299
<i>By R. C. MACKENZIE</i>	
Oxides of iron, 299 ; oxides of aluminium, 311 ; oxides of manganese. 320 ; general conclusions, 324 ; references, 325 .	
XIII. The Carbonate Minerals	329
(with some notes on calcium and magnesium hydroxides)	
By T. L. WEBB and H. HEYSTEK	
General thermal behaviour of carbonates, 330 ; differential thermal curves for carbonate minerals, 331 ; interpretation of differential thermal curves for carbonate minerals, 350 ; notes on calcium and magnesium hydroxides, 354 ; references, 357 .	
<i>Appendix</i> : Recommended techniques for use with carbonate minerals. 359 ; references, 363 .	
XIV. Other Minerals	364
<i>By R. J. W. McLAUGHLIN</i>	
Sulphides, 364 ; halides, 367 ; sulphates, 369 ; nitrates, 372 ; borates, 373 ; phosphates, 374 ; silicates, 375 ; references, 379 .	
<i>Appendix</i> (compiled by R. J. W. McLAUGHLIN and R. C. MACKENZIE): Sources of data, 379 .	
XV. Differential Thermal Analysis using Controlled Atmosphere	389
<i>By E. C. JONAS and R. E. GRIM</i>	
Development of apparatus, 389 ; results obtained by controlled-atmosphere techniques, 393 ; summary, 402 ; references, 402 .	
XVI. Carbonaceous Materials	404
By R. W. GRIMSHAW and A. L. ROBERTS	
Origin and nature of carbonaceous materials, 404 ; suppression of the exothermic effect, 406 ; complete combustion, 411 ; identification of organic compounds, 414 ; references, 416 .	
XVII. Practical Applications	418
<i>By R. H. S. ROBERTSON</i>	
Pedology and geology, 418 ; clay industries, 419 ; mining industries, 420 ; chemical industries, 421 ; conclusion, 423 ; references, 423 .
