| Preface to Volume Three | xi  |

## SECTION I: FUNDAMENTALS

|                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1. Fundamental Concepts and Definitions Relating to Humidity, <i>Louis P. Harrison</i>                                                                | 3   |
| 2. Some Fundamental Considerations Regarding Psychrometry, <i>Louis P. Harrison</i>                                                                   | 71  |
| 3. Imperfect Gas Relationships, <i>Louis P. Harrison</i>                                                                                              | 105 |
| 4. Survey of the Equation of State and Transport Properties of Moist Gases, <i>E. A. Mason and L. Monchick</i>                                        | 257 |
| 5. Moist Air Properties from Tabulated Virial Coefficients, <i>J. B. Chaddock</i>                                                                     | 273 |
| 6. The Gibbs-Dalton Law Not a Basis for Standardization, <i>John A. Goff</i>                                                                          | 285 |
| 7. Saturation Pressure of Water on the New Kelvin Scale, <i>John A. Goff</i>                                                                          | 289 |
| 8. Potential Temperature, the Problem of Its Nonexistence, <i>John A. Goff</i>                                                                        | 293 |
| 9. The Pseudoadisbats of Moist Air, A Thermodynamically Consistent Definition, <i>John A. Goff</i>                                                    | 297 |
| 10. Measurements of the Viscosity of Dry and Humid Air, <i>J. Kestin and J. H. Whitelaw</i>                                                           | 301 |
| 11. Plans for Proposed New Tables of the Thermodynamic Properties of Moist Air, <i>J. C. Davis, T. K. Faison, Jr. and P. R. Achenbach</i>             | 315 |
| 12. The Relationship of Humidity Reporting Forms and Humidity Sensors, <i>Elias J. Amdur</i>                                                          | 321 |
| 13. The Laminar and Turbulent Boundary Layer Equations and Their Application to Humidification and Dehumidification Processes, <i>E. R. G. Eckert</i> | 327 |
| 14. Evaluating Thermodynamic Properties of Soil Water, <i>Sterling A. Taylor and Jacob W. Kijne</i>                                                   | 335 |
| 15. The Influence of Steady Temperature Gradients upon Water Transport in Soil Materials, <i>Sterling A. Taylor</i>                                   | 343 |
| 16. Forced Vaporization of Water, <i>Ted A. Erikson</i>                                                                                               | 351 |
| 17. Surface-moisture Phenomena under Icing Conditions, <i>J. R. Pingry and R. B. Engdahl</i>                                                          | 355 |
| 18. Tait Coefficients of Water, <i>Robert Ginell and A. Margot Ginell</i>                                                                             | 363 |

## SECTION II: STANDARDS

|                                                                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 19. The NBS Standard Hygrometer, <i>Arnold Wexler and Richard W. Hyland</i>                                                                                                                           | 389 |
| 20. A Pneumatic Bridge Hygrometer for Use as a Working Humidity Standard, <i>Lewis Greenspan</i>                                                                                                      | 433 |
| 21. Two-pressure Relative Humidity Standards, <i>Elias J. Amdur and Robert W. White</i>                                                                                                               | 445 |
| 22. A Comparison between the National Bureau of Standards Two-pressure Humidity Generator and the National Bureau of Standards Standard Hygrometer, <i>S. Hasegawa, R. W. Hyland and S. W. Rhodes</i> | 455 |
| 23. An Atmosphere Producer for Laboratory Use, <i>J. D. Wentzel</i>                                                                                                                                   | 461 |
| 24. Moisture Monitor Testing and Calibration, <i>C. D. Montgomery, J. M. Googin and L. R. Phillips</i>                                                                                                | 467 |

|                                                                                                                                                    |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 26. Mixing Hygrostat for Calibration of Hygroscopic Hygrometers, <i>Vilho Väisälä</i>                                                              | 473 |
| 26. Thermohygrostatic Chamber, <i>K. Kostyrko, J. Czernik and T. Plebanski</i>                                                                     | 479 |
| 27. A New Apparatus for the Study of Moisture Sorption by Starches and Other Food-stuffs in Humidified Atmospheres, <i>P. R. Smith</i>             | 487 |
| 28. Automatic Relative Humidity Test Chamber, <i>Loren L. Krueger</i>                                                                              | 495 |
| 29. The Control of Conditioning Atmospheres by Saturated Salt Solutions, <i>S. Martin</i>                                                          | 503 |
| 30. The Properties of Water-salt Systems in Relation to Humidity, <i>R. G. Wylie</i>                                                               | 507 |
| 31. Relative Humidities over Saturated Solutions of Nine Salts in the Temperature Range from 0 to 90°F. C. <i>P. Hedlin and F. N. Trofimenkoff</i> | 519 |
| 32. Vapor Pressures of Saturated Aqueous Salt Solutions, <i>Donald T. Acheson</i>                                                                  | 521 |
| 33. Control of Atmospheric Humidity by Aqueous Sulfuric Acid Solution, <i>Koji Kawasaki and Kyoichi Kanou</i>                                      | 531 |
| 34. A Simple Procedure for Measurement of Vapor Pressure over Aqueous Salt Solutions, <i>E. U. Schlünder</i>                                       | 535 |
| Author Index                                                                                                                                       | 545 |
| Subject Index                                                                                                                                      | 547 |
