

CONTENTS

1.	The chemical elements and the earth	1
	1.1 Distribution of the elements	1
	1.2 Evolution of the elements	8
	1.3 Formation of the Earth	10
	1.4 Geochemical separation of the elements	13
	1.5 Redistribution of the elements	17
2.	Rocks and minerals	20
	2.1 Rocks	20
	2.2 Minerals	23
	2.3 The concentration of minerals	29
	2.4 Mineral processing (Mineral Technology)	31
	2.5 The exploitation of minerals	34
	2.6 Extra-terrestrial rocks and minerals	35
3.	The structures of minerals	37
	3.1 General considerations	37
	3.2 The silicate structures	402
	3.3 The importance of the size of ions	47
	3.4 Gemstones	49
4.	Applications of chemical principles to geological problems	52
	4.1 Crystallisation from a melt	52
	4.2 The solid State	57
	4.3 Metamorphism	59
	4.4 Weathering and sedimentation	63
	4.5 Precipitation from the sea	71
5.	The geochemical cycle	73
	5.1 The atmosphere	73
	5.2 The biosphere	75
	5.3 The influence of man	78
	5.4 Rocks and minerals and the United Kingdom	80
6.	Suggestions for experimental work	83
	6.1 Familiarisation with material	83
	6.2 Investigating minerals	85
	6.3 Mineral processing	87
	6.4 Aspects of the sedimentary processes	88
	6.5 Aspects of the crystallisation processes	90

6.6 A local study	91
Suggestions for further reading	92
Index	95
