<i>Preface</i>	xx
1 Plant Phenolics – Secondary Metabolites with Diverse Functions	1
<i>Vincenzo Lattanzio, Paul A. Kroon, Stéphane Quideau and Dieter Treutter</i>	
1.1 Secondary metabolism in the interactions between plants and their environment	1
1.2 Function and use of plant phenolics	5
1.2.1 UV sunscreens	6
1.2.2 Phenolics as signal compounds	6
1.2.3 Phenolics as pigments	8
1.2.4 Phenolics and plant growth	9
1.2.5 Phenolics and plant defense	11
1.2.5.1 Fungal pathogens	13
1.2.5.2 Phenolics and plant–insect interactions	17
1.2.6 Plant phenolics and health	22
1.3 Note	24
1.4 References	24
2 Lignification: are Lignins Biosynthesized via simple Combinatorial Chemistry or via Proteinaceous Control and Template Replication?	36
<i>John Ralph, Gösta Brunow, Philip J. Harris, Richard A. Dixon, Paul F. Schatz and Wout Boerjan</i>	
2.1 Introduction	36
2.2 The current theory	37
2.3 Is there a need for a new theory?	37
2.3.1 The challenge hypothesis (proteinaceous control and template replication)	38
2.3.2 Has the challenge hypothesis become a theory?	38
2.4 Are criticisms of the current theory valid?	38
2.4.1 Lignification as a biochemical anomaly	38

2.4.2	The β -ether frequency anomaly	39
2.4.3	'Obligatory' linkages?	40
2.5	Is there anything wrong with the dirigent hypothesis?	40
2.5.1	Monomer substitution	40
2.5.1.1	Has monomer substitution been disproven?	41
2.5.1.2	Malleability of lignification: what makes a good monolignol substitute?	43
2.5.2	'Well-defined primary structure'	45
2.5.2.1	Sequencing of lignin oligomers	45
2.5.2.2	Monomer-independent sequences	46
2.5.2.3	The 'urgent need to sequence lignin primary structure'	47
2.5.3	Lignins' racemic nature	47
2.5.3.1	The 'number of isomers' problem	48
2.5.4	Comments on template replication	48
2.5.5	Polymer branching	49
2.6	Why the new hypothesis is not in contention	50
2.7	Is lignification a biochemical anomaly?	51
2.7.1	Ferulate dehydrodimerization is combinatorial	51
2.7.2	Polysaccharide primary structure is NOT absolutely dictated	51
2.8	Summary comments on the dirigent/replication hypothesis	52
2.9	Conclusions	53
2.10	Notes	55
2.11	References	58

3 Flavonoid-Protein Binding Processes and their Potential Impact on Human Health **67**

Olivier Dangles and Claire Dufour

3.1	Introduction	67
3.2	Biologically relevant chemical properties of flavonoids	68
3.3	Binding processes prior to absorption	71
3.4	Binding processes involved in flavonoid bioavailability	72
3.4.1	Absorption and conjugation	72
3.4.2	Transport in plasma	73
3.4.3	Tissue distribution and cellular metabolism	73
3.5	Binding processes involved in the potential health effects of flavonoids	74
3.5.1	Inhibition of enzymes involved in ROS production	74
3.5.2	Modulation of the redox properties of flavonoids by binding to proteins	76
3.5.3	Inhibition of protein kinases	78
3.5.4	Inhibition of cytochrome P450 enzymes	79
3.5.5	Regulation of gene expression	80
3.6	Conclusion	83
3.7	References	83

4	Methods for Synthesizing the Cocoa-Derived Oligomeric Epi-Catechins – Observations on the Anticancer Activity of the Cocoa Polyphenols	88
	<i>Alan P. Kozikowski and Werner Tückmantel</i>	
4.1	Introduction	88
4.2	Synthesis of procyanidins	89
4.2.1	General chemical properties of cocoa procyanidins	89
4.2.2	Earlier synthetic work	91
4.2.3	The synthesis of benzyl-protected building blocks	92
4.2.4	Inter-flavan bond formation using benzyl-protected building blocks	94
4.2.5	Establishment of inter-flavan bond stereochemistry	97
4.2.6	Further developments	102
4.3	Anticancer activity	105
4.4	Acknowledgments	109
4.5	References	109
5	Gene Discovery and Metabolic Engineering in the Phenylpropanoid Pathway	113
	<i>Luzia V. Modolo, Yongzhen Pang, Li Tian and Richard A. Dixon</i>	
5.1	Introduction	113
5.2	Biosynthesis and functions of isoflavones	113
5.3	Dietary sources of isoflavones	115
5.4	Metabolic engineering of isoflavones	115
5.4.1	Metabolic engineering by ectopic expression of IFS	115
5.4.2	Structural biology-assisted design and metabolic engineering with an artificial bifunctional IFS enzyme	116
5.5	Gene discovery in the proanthocyanidin biosynthetic pathway	117
5.5.1	Structural genes for PA biosynthesis	118
5.5.2	Regulatory genes for PA biosynthesis	121
5.6	Metabolic engineering of PAs in plants	122
5.7	Glycosyltransferases for modification of phenylpropanoid compounds – <i>in-vitro</i> biochemistry and <i>in-vivo</i> function	123
5.7.1	UGTs active with non-flavonoid phenolic compounds	124
5.7.2	Glycosylation of flavonoid compounds	128
5.7.3	Problems for the functional annotation of UGTs	130
5.8	Concerted strategies for metabolic engineering	131
5.9	References	132
5.10	Abbreviation list of the pathway genes	138
6	Recent Advances in the Molecular Biology and Metabolic Engineering of Flavonoid Biosynthesis in Ornamental Plants	139
	<i>Kevin M. Davies, Huaibi Zhang and Kathy E. Schwinn</i>	

6.1	Introduction	139
6.2	Metabolic engineering of flavonoid production in flowers	142
	6.2.1 Engineering yellow flower colors	143
	6.2.2 Engineering blue flower colors	144
6.3	Anthocyanic vacuolar inclusions	149
6.4	Regulation of anthocyanin biosynthesis	152
6.5	Concluding comments	157
6.6	References	158
7	Recent Advances in the Field of Anthocyanins – Main Focus on Structures	167
	<i>Øyvind M. Andersen</i>	
7.1	Introduction	167
7.2	Anthocyanidins	168
7.3	Anthocyanidin equilibrium forms	178
7.4	New anthocyanin glycosides	181
7.5	New anthocyanin acylglycosides	183
7.6	Flavonoid complexes including at least one anthocyanidin subunit	187
7.7	Metalloanthocyanins	188
7.8	Biosynthesis and molecular biology	189
7.9	Anthocyanin localization in plant cells	191
7.10	Acknowledgments	192
7.11	Notes	192
7.12	References	193
8	Salicylic Acid and Induced Plant Defenses	202
	<i>Jean-Pierre Métraux, Elisabeth Lamodièrre, Jérémy Catinot, Olivier Lamotte and Christophe Garcion</i>	
8.1	Induced resistance and phenolics	202
8.2	The biosynthesis of SA	203
8.3	The network of signaling and the action of SA	205
8.4	Conclusions	207
8.5	Acknowledgment	207
8.6	References	207
9	Phenols and the Onset and Expression of Plant Disease Resistance	211
	<i>Ray Hammerschmidt and Samantha I. Hollosy</i>	
9.1	Introduction	211
9.2	Biosynthetic origins of defense-associated phenolic compounds	212
9.3	Phenolic compounds as preformed defenses	212

9.3.1	Resistance of onion bulbs	213
9.3.2	Fusarium wilt of carnation	214
9.3.3	Mango fruit and <i>Alternaria</i>	214
9.3.4	Regulation of preformed antifungal compounds by phenols in avocado	214
9.3.5	Chlorogenic acid and the infection of stone fruit by <i>Monilinia</i>	215
9.4	Active defense	215
9.5	Localized defenses	216
9.5.1	Phenolic phytoalexins	216
9.5.2	Phenolic structural defenses	218
9.5.3	Plant phenols and induced disease resistance	219
9.6	Responses of the induced plant	220
9.6.1	Induced resistance in green bean and <i>C. lindemuthianum</i>	220
9.6.2	Acibenzolar-S-methyl mediated induced resistance	220
9.6.3	Plant growth-promoting rhizobacteria and induced resistance	220
9.6.4	Silicon as a modulator of defense and phenolic compounds	221
9.7	Chemical induction of phenolic compounds and resistance	221
9.7.1	Structural phenolic compounds and induced resistance	221
9.7.2	Antioxidant activity of phenolic compounds and plant defense	222
9.8	Phenols and defense: a multitude of roles	222
9.9	Acknowledgment	223
9.10	References	223
10	Bioactivity, Absorption, and Metabolism of Anthocyanins	228
	<i>Giuseppe (Joe) Mazza and Colin D. Kay</i>	
10.1	Introduction	228
10.1.1	Structural characteristics	228
10.2	Bioactivity	229
10.2.1	Antioxidant activity	230
10.2.2	Anti-inflammatory effects	233
10.2.3	Anti-atherogenic effects	233
10.2.4	Anticarcinogenic effects	234
10.2.5	Antibacterial and antiviral activity	235
10.2.6	Neuroprotective effects	235
10.2.7	Prevention of obesity	235
10.2.8	Gastric protective effects	236
10.2.9	Improvement of vision	236
10.3	Absorption of anthocyanins	236
10.3.1	Variability of absorption	239
10.3.1.1	Variations in dosage	239
10.3.1.2	Chemical structure of the anthocyanins	240
10.3.1.3	Food matrix	241
10.3.1.4	Analytical methodology	241
10.3.2	Elimination	242

10.3.3	The concentration of anthocyanins in human blood and urine is very low	243
10.3.4	Suggested mechanisms of anthocyanin absorption	243
10.3.5	Structural transformations of anthocyanins	245
10.4	Metabolism of anthocyanins	247
10.4.1	Human studies	247
10.4.2	Animal studies	251
10.4.2.1	Rat studies	251
10.4.2.2	Pig studies	252
10.4.3	Potential mechanisms of anthocyanin metabolism	252
10.5	Conclusions	254
10.6	References	254
11	Bioavailability, Metabolism, and Bioactivity of Food Ellagic Acid and Related Polyphenols	263
	<i>Francisco A. Tomás-Barberán, María Teresa García-Conesa, Mar Larrosa, Begoña Cerdá, Rocío González-Barrio, María José Bermúdez-Soto, Antonio González-Sarriás and Juan Carlos Espín</i>	
11.1	Introduction	263
11.2	Ellagitannins and ellagic acid as examples of bioactive polyphenols	264
11.3	Evaluation of antioxidant activity <i>in vitro</i>	265
11.4	Biological activity associated to ellagitannin-rich food intake; clinical studies	265
11.5	Questions arising after the demonstration of the large antioxidant activity <i>in vitro</i> and the biological activity associated with the intake of ellagitannin-rich food	266
11.5.1	Bioavailability and metabolism of ellagitannins and ellagic acid and distribution of the metabolites in different tissues	267
11.5.2	Evaluation of the biological activity of ellagitannin metabolites produced <i>in vivo</i>	269
11.6	Conclusion	275
11.7	Acknowledgments	275
11.8	References	275
-		
12	Multiplicity of Phenolic Oxidation Products in Apple Juices and Ciders, from Synthetic Medium to Commercial Products	278
	<i>Sylvain Guyot, Stéphane Bernillon, Pascal Poupard and Catherine M.G.C. Renard</i>	
12.1	Introduction	278
12.2	Preparation and characterization of the caffeoylquinic acid <i>o</i> -quinone solution	281

12.3	Incubation of caffeoylquinic acid <i>o</i> -quinone in model solutions	282
12.3.1	Incubation of caffeoylquinic acid <i>o</i> -quinone with caffeoylquinic acid	282
12.3.2	Incubation of caffeoylquinic acid <i>o</i> -quinone with (–)-epicatechin	285
12.4	LC-MS analysis of oxidation products in commercial apple beverages	288
12.5	Conclusions	290
12.6	Acknowledgments	290
12.7	References	290

13 Phytoestrogens in Drug Discovery for Controlling Steroid Biosynthesis 293

Sampo Karkola, Annamaria Lilienkampf and Kristiina Wähälä

13.1	Introduction	293
13.2	Aromatase	293
13.2.1	Natural phytoestrogens as aromatase inhibitors	295
13.2.1.1	Anti-aromatase activity of phytoestrogens in human placental microsome-based assays	295
13.2.1.2	Anti-aromatase activity of phytoestrogens in cell-based assays	298
13.2.1.3	Anti-aromatase activity of phytoestrogens in recombinant-enzyme assays	299
13.2.1.4	The anti-aromatase activity of various phytoestrogens	299
13.2.2	The structure–activity relationship of phytoestrogens	300
13.2.3	Phytoestrogens as lead compounds for aromatase inhibition	301
13.3	17 β -Hydroxysteroid dehydrogenases and their inhibition by phytoestrogens	304
13.3.1	17 β -HSD type 1	305
13.3.1.1	Binding of phytoestrogens to 17 β -HSD1	307
13.3.2	17 β -HSD types 2 and 4	307
13.3.3	Fungal 17 β -HSDcl	308
13.3.3.1	Binding of phytoestrogens to 17 β -HSDcl	309
13.3.4	17 β -HSD type 3	310
13.3.5	17 β -HSD type 5	310
13.3.6	Phytoestrogens as lead compounds for 17 β -HSD inhibitors	311
13.4	Conclusions	312
13.5	Acknowledgments	313
13.6	References	313

14 Recent Advances in the Chemical Synthesis and Biological Activity of Phenolic Metabolites 317

Denis Barron

14.1	Introduction	317
14.2	The different sites of generation of phenolic metabolites	318
14.2.1	The saliva	318

14.2.2	The stomach	319
14.2.3	The small intestine	319
14.2.4	The colon	320
14.2.5	The liver	320
14.2.6	Metabolism at the target tissues or cells	321
14.3	Nature of the metabolites of phenolic compounds	321
14.3.1	Flavone and flavonol metabolites	321
14.3.2	Flavanonone and flavanonol metabolites	322
14.3.3	Flavan 3-ol metabolites	324
14.3.4	Ellagic tannin metabolites	324
14.3.5	Lignan metabolites	325
14.3.6	Isoflavone metabolites	325
14.3.7	Hydroxycinnamic acid metabolites	326
14.3.8	Curcumin metabolites	327
14.3.9	Resveratrol metabolites	328
14.4	The chemical synthesis of phenolic conjugates	328
14.4.1	The preparation of O-glucuronides	329
14.4.2	The preparation of O-sulfates	332
14.5	The biological properties of phenolic conjugates	334
14.5.1	Antioxidant properties	334
14.5.1.1	Flavonol conjugates	334
14.5.1.2	Flavone conjugates	340
14.5.1.3	Flavanone conjugates	340
14.5.1.4	Flavan 3-ol conjugates	340
14.5.1.5	Isoflavone conjugates	340
14.5.1.6	The case of the 7-O-conjugates	341
14.5.2	Pro-oxidant properties	342
14.5.3	Interaction with signaling cascades	343
14.5.4	Enzyme inhibition	344
14.5.4.1	Aldose reductase	344
14.5.4.2	β -glucuronidase	344
14.5.4.3	Xanthine oxidase	344
14.5.4.4	Glycerol 3-phosphate dehydrogenase	345
14.5.4.5	Cyclooxygenase-2	345
14.5.5	Effect on vascular function and angiogenesis	345
14.5.6	Non-covalent binding to proteins	345
14.5.7	Activity of microbial and tissular metabolites	346
14.6	The cellular transport of phenolic conjugates	346
14.6.1	Cellular efflux	346
14.6.2	Cellular uptake	347
14.7	Conclusions	348
14.8	References	350

15 Polyphenols and Gene Expression	359
<i>Uwe Wenzel and Hannelore Daniel</i>	
15.1 Introduction	359
15.2 The effects of polyphenols on the expression of genes underlying detoxification mechanisms	359
15.3 Polyphenols and the expression of genes underlying cancer-relevant processes	363
15.4 The impact of polyphenols on the expression of genes underlying atherosclerosis-relevant processes	369
15.5 References	373
