

Contents

1	The chemical structure of pectins	1
	HENK A. SCHOLS and ALPHONS G. J. VORAGEN	
1.1	Introduction	1
1.2	Chemical structure of pectins	2
1.2.1	Structural elements	6
1.3	Chemical stability of pectins	18
1.4	Pectins as food ingredients	19
1.5	Pectins as 'bioactive' compounds	21
1.6	Methodology in pectin research	22
	References	25
2	Interactions between pectins and other polymers	30
	ANDREW J. MORT	
2.1	Introduction	30
2.2	An overview of cell wall models	30
2.3	Experimental approaches to the study of covalent crosslinks between polymers	31
2.4	What types of crosslinks to expect	33
2.5	Historical perspective on crosslinks to pectins	33
2.6	Evidence in 1973 for a xyloglucan–pectin linkage and a pectin–protein linkage	34
2.7	Testing the 1973 cell wall model	35
2.8	Recent evidence for the existence of some crosslinking between pectin and hemicellulose	38
2.9	Ester linkages between pectin and other polymers	41
2.10	Recent evidence for the existence of some crosslinking between pectin and extensin	42
2.11	Considering crosslinks and cell wall dynamics	44
2.12	Miscellaneous interactions of pectins with other polymers	45
2.12.1	Covalent interactions	45
2.12.2	Noncovalent interactions	46
2.13	General conclusions	47
	Acknowledgements	47
	References	47
3	Biosynthesis of pectins	52
	DEBRA MOHNEN	
3.1	Introduction	52
3.2	What is the structure of newly synthesized pectin?	53
3.3	Subcellular location of pectin synthesis	53
3.4	Synthesis of the nucleotide-sugar substrates required for pectin synthesis	59

CONTENTS

3.4.1	Uridine diphosphate- α -D-galacturonic acid (UDP-GalA)	62
3.4.2	Uridine diphosphate- β -L-arabinose (UDP-L-Ara)	63
3.4.3	Uridine diphosphate- β -L-rhamnose (UDP-L-Rha)	64
3.4.4	Uridine diphosphate- α -D-galactose (UDP-Gal)	65
3.4.5	Uridine diphosphate- α -D-glucuronic acid (UDP-GlcA)	66
3.4.6	Uridine diphosphate- α -D-xylose (UDP-Xyl)	68
3.4.7	Guanosine diphosphate- β -L-fucose (GDP-Fuc)	68
3.4.8	Uridine diphosphate- α -D-apiose (UDP-apiose)	70
3.4.9	Guanosine diphosphate- β -L-galactose (GDP-Gal)	71
3.4.10	XXX-Kdo, XXX-Dha and XXX-aceric acid	71
3.5	Glycosyltransferases involved in pectin biosynthesis	72
3.5.1	Synthesis of homogalacturonan	73
3.5.2	Synthesis of substituted homogalacturonans	78
3.5.3	Synthesis of rhamnogalacturonan I (RG-I)	82
3.6	Future directions and resources for studying pectin biosynthesis	87
	Acknowledgements	88
	References	88
4	Biophysical properties of pectins	99
	MICHAEL C. JARVIS	
4.1	Introduction	99
4.2	The mechanical properties of biopolymer gels	103
4.2.1	Gel structure	103
4.2.2	Mechanisms for the deformation of gels under stress	104
4.2.3	Single-chain mechanics	105
4.2.4	Junction zones under mechanical stress	107
4.3	Mechanochemistry of the component chains of pectins	111
4.3.1	Chain conformation	111
4.3.2	Single pectic chains under tension	113
4.3.3	Chain aggregation and the potential formation of junction zones	115
4.3.4	Covalent crosslinks	118
4.4	Conclusions: pectic gels under stress	121
	References	123
5	Cell and developmental biology of pectins	131
	J. PAUL KNOX	
5.1	Introduction to pectin biology	131
5.2	Tools and approaches for the analysis of pectins in <i>planta</i>	132
5.3	Pectins and the cell wall	134
5.3.1	Pectic polysaccharides and matrix properties	134
5.3.2	Pectin and cell wall architecture	135
5.4	Pectins and cell processes	138
5.4.1	Pectins, metabolism and signalling	138
5.4.2	Cell proliferation	139
5.4.3	Cell expansion	139
5.4.4	Cell differentiation	142
5.4.5	Pectins and the intercellular matrix: cell adhesion	143
5.5	Prospects	145

6	Modification and degradation of pectins	150
	GREGORY A. TUCKER and GRAHAM B. SEYMOUR	
6.1	Introduction	150
6.2	Pectin-degrading enzymes	150
6.2.1	Pectinesterase	153
6.2.2	Polygalacturonase	154
6.2.3	Pectate lyase	155
6.2.4	Pectin acetylerase	156
6.2.5	β -Galactosidase and α -arabinosidase	157
6.2.6	Rhamnogalacturonase and minor pectinases	157
6.2.7	Peroxidase	158
6.3	Pectin modification during plant development	158
6.3.1	Fruit ripening	158
6.3.2	Abscission	162
6.3.3	Growth	162
6.4	Functional analysis of pectinases	163
6.5	Application of gene silencing techniques	164
6.6	Use of mutants	166
6.7	Conclusion and prospects	167
