### Part I Chemistry and Biology – Historical and Philosophical Aspects

<b>1</b>	<b>Chemistry and Biology – Historical and Philosophical Aspects</b>	<b>3</b>
	<i>Gerhard Quinkert, Holger Wallmeier, Norbert Windhab, and Dietmar Reichert</i>	
1.1	Prologue	3
1.2	Semantics	4
1.2.1	Synthesis – Genesis – Preparation	4
1.2.2	Synthetic Design – Synthetic Execution	8
1.2.3	Preparative Chemistry – Synthetic Chemistry	9
1.3	Bringing Chemical Solutions to Chemical Problems	10
1.3.1	The Present Situation	10
1.3.2	Historical Periods of Chemical Synthesis	12
1.3.3	<i>Diels–Alder</i> Reaction – Prototype of a Synthetically Useful Reaction	16
1.4	Bringing Chemical Solutions to Biological Problems	18
1.4.1	The Role of Evolutionary Thinking in Shaping Biology	18
1.4.2	On the Sequence of Chemical Synthesis (Preparation) and Biological Analysis (Screening)	20
1.5	Bringing Biological Solutions to Chemical Problems	45
1.5.1	Proteins [99]	45
1.5.2	Antibodies	52
1.6	Bringing Biological Solutions to Biological Problems	53
1.7	EPILOGUE	54
1.7.1	The Fossil Fuel Dilemma of Present Chemical Industry	54

3.2	Controlling Protein Function by Caged Compounds	140
	<i>Andrea Giordano, Sirius Zarbakhsh, and Carsten Schultz</i>	
3.2.1	Introduction	140
3.2.2	Photoactivatable Groups and Their Applications	140
3.2.3	Caged Peptides and Proteins	150
3.2.4	Caged Proteins by Introduction of Photoactive Residues via Site Directed, Unnatural Amino Acid Mutagenesis	156
3.2.5	Small Caged Molecules Used to Control Protein Activity	159
3.2.6	Conclusions	168
	References	168
3.3	Engineering Control Over Protein Function; Transcription Control by Small Molecules	174
	<i>John T. Koh</i>	
	Outlook	174
3.3.1	Introduction	174
3.3.2	The Role of Ligand-dependent Transcriptional Regulators	175
3.3.3	Engineering New Ligand Specificities into NHRs	179
3.3.4	The Requirement of "Functional Orthogonality"	180
3.3.5	Overcoming Receptor Plasticity	180
3.3.6	Nuclear Receptor Engineering by Selection	183
3.3.7	Ligand-dependent Recombinases	184
3.3.8	Complementation/Rescue of Genetic Disease	186
3.3.9	<i>De Novo</i> Design of Ligand-binding Pockets	188
3.3.10	Light-activated Gene Expression from Small Molecules	189
	References	191
4	<b>Controlling Protein–Protein Interactions</b>	199
4.1	Chemical Complementation: Bringing the Power of Genetics to Chemistry	199
	<i>Pamela Peralta-Yahya and Virginia W. Cornish</i>	
	Outlook	199
4.1.1	Introduction	199
4.1.2	History/Development	202
4.1.3	General Considerations	208
4.1.4	Applications	216
4.1.5	Future Development	222
	References	223
4.2	Controlling Protein–Protein Interactions Using Chemical Inducers and Disrupters of Dimerization	227
	<i>Tim Clackson</i>	
	Outlook	227

4.2.1	Introduction	227
4.2.2	Development of Chemical Dimerization Technology	228
4.2.3	Dimerization Systems	229
4.2.4	Applications	237
4.2.5	Future Development	245
4.2.6	Conclusion	245
	Acknowledgments	246
	References	246
4.3	Protein Secondary Structure Mimetics as Modulators of Protein–Protein and Protein–Ligand Interactions	250
	<i>Hang Yin and Andrew D. Hamilton</i>	
	Outlook	250
4.3.1	Introduction	250
4.3.2	History and Development	251
4.3.3	General Considerations	253
4.3.4	Applications and Practical Examples	255
4.3.5	Future Developments	264
4.3.6	Conclusion	265
	Acknowledgments	265
	References	265
<b>5</b>	<b>Expanding the Genetic Code</b>	<b>271</b>
5.1	Synthetic Expansion of the Central Dogma	271
	<i>Masahiko Sisido</i>	
	Outlook	271
5.1.1	Introduction	272
5.1.2	Aminoacylation of tRNA with Nonnatural Amino Acids	274
5.1.2.2	Micelle-mediated Aminoacylation	275
5.1.2.3	Ribozyme-mediated Aminoacylation	276
5.1.2.4	PNA-assisted Aminoacylation	277
5.1.2.5	Directed Evolution of Existing aaRS/tRNA Pair to Accept Non-natural Amino Acids	278
5.1.3	Other Biomolecules That Must Be Optimized for Nonnatural Amino Acids	281
5.1.3.2	Adaptability of EF-Tu to Aminoacyl-tRNAs Carrying a Wide Variety of Nonnatural Amino Acids	283
5.1.3.3	Adaptability of Ribosome to Wide Variety of Nonnatural Amino Acids	283
5.1.4	Expansion of the Genetic Codes	284
5.1.4.2	Four-base Codons	285
5.1.4.3	"Synthetic Codons" That Contain Nonnatural Nucleobases	286
	<i>In vivo</i> Synthesis of Nonnatural Mutants	287

- 5.1.6 Application of Nonnatural Mutagenesis – Fluorescence Labeling 289
- 5.1.7 Future Development and Conclusion 291
- Acknowledgments 291
- References 291

### Part III Engineering Control Over Protein Function Using Chemistry

- 6 **Forward Chemical Genetics** 299
  - Stephen J. Haggarty and Stuart L. Schreiber*
  - Outlook 299
  - 6.1 Introduction 299
  - 6.2 History/Development 302
  - 6.3 General Considerations 307
  - 6.3.1 Small Molecules as a Means to Perturb Biological Systems Conditionally 307
  - 6.3.2 Forward and Reverse Chemical Genetics 308
  - 6.3.3 Phenotypic Assays for Forward Chemical-Genetic Screening 311
  - 6.3.4 Nonheritable and Combinations of Perturbations 316
  - 6.3.5 Multiparametric Considerations: Dose and Time 318
  - 6.3.6 Sources of Phenotypic Variation: Genetic versus Chemical Diversity 318
  - 6.3.7 The "Target Identification" Problem 319
  - 6.3.8 Relationship between Network Connectivity and Discovery of Small-molecule Probes 323
  - 6.3.9 Computational Framework for Forward Chemical Genetics: Legacy of Morgan and Sturtevant 325
  - 6.3.10 Mapping of Chemical Space Using Forward Chemical Genetics 326
  - 6.3.11 Dimensionality Reduction and Visualization of Chemical Space 330
  - 6.3.12 Discrete Methods of Analysis of Forward Chemical-genetic Data 334
  - 6.4 Applications and Practical Examples 336
    - 6.4.1 Example 1: Mitosis and Spindle Assembly 336
    - 6.4.2 Example 2: Protein Acetylation 338
    - 6.4.3 Example 3: Chemical-genomic Profiling 340
  - 6.5 Future Development 344
  - 6.6 Conclusion 347
  - Acknowledgments 348
  - References 349

<b>7</b>	<b>Reverse Chemical Genetics Revisited</b>	355
7.1	Reverse Chemical Genetics – An Important Strategy for the Study of Protein Function in Chemical Biology and Drug Discovery	355
	<i>Rolf Breinbauer, Alexander Hillisch, and Herbert Waldmann</i>	
7.1.1	Introduction	355
7.1.2	History/Development	356
7.1.3	General Considerations	361
7.1.4	Applications and Practical Examples	366
7.1.5	Future Developments	376
7.1.6	Conclusion	379
	Acknowledgments	380
	References	380
7.2	Chemical Biology and Enzymology: Protein Phosphorylation as a Case Study	385
	<i>Philip A. Cole</i>	
	Outlook	385
7.2.1	Overview	385
7.2.2	The Enzymology of Posttranslational Modifications of Proteins	387
	References	401
7.3	Chemical Strategies for Activity-based Proteomics	403
	<i>Nadim Jessani and Benjamin F. Cravatt</i>	
	Outlook	403
7.3.1	Introduction	403
7.3.2	History/Development	404
7.3.3	General Considerations	407
7.3.4	Applications and Practical Examples	415
7.3.5	Future Development	421
7.3.6	Conclusions	422
	Acknowledgments	423
	References	423
<b>8</b>	<b>Tags and Probes for Chemical Biology</b>	427
8.1	The Biarsenical-tetracysteine Protein Tag: Chemistry and Biological Applications	427
	<i>Stephen R. Adams</i>	
	Outlook	427
8.1.1	Introduction	427
8.1.2	History and Design Concepts of the Tetracysteine-biarsenical System	429

- 8.1.3 General Considerations 430
- 8.1.4 Practical Applications of the Biarsenical-tetracysteine System 439
- 8.1.5 Future Developments and Applications 453
- 8.1.6 Conclusions 454  
 Acknowledgments 454  
 References 454
- 8.2 Chemical Approaches to Exploit Fusion Proteins for Functional Studies 458  
*Anke Arnold, India Sielaff, Nils Johnsson, and Kai Johnsson*  
 Outlook 458
- 8.2.1 Introduction 458
- 8.2.2 General Considerations 459
- 8.2.3 Applications and Practical Examples 463
- 8.2.4 Conclusions and Future Developments 476  
 Acknowledgments 477  
 References 477

## Volume 2

### Part IV Controlling Protein–Protein Interactions

- 9 Diversity-oriented Synthesis 483**
- 9.1 Diversity-oriented Synthesis 483  
*Derek S. Tan*
- 9.2 Combinatorial Biosynthesis of Polyketides and Nonribosomal Peptides 519  
*Nathan A. Schnarr and Chaitan Khosla*
- 10 Synthesis of Large Biological Molecules 537**
- 10.1 Expressed Protein Ligation 537  
*Matthew R. Pratt and Tom W. Muir*
- 10.2 Chemical Synthesis of Proteins and Large Bioconjugates 567  
*Philip Dawson*
- 10.3 New Methods for Protein Bioconjugation 593  
*Matthew B. Francis*
- 11 Advances in Sugar Chemistry 635**
- 11.1 The Search for Chemical Probes to Illuminate Carbohydrate Function 635  
*Laura L. Kiessling and Erin E. Carlson*

11.2      **Chemical Glycomics as Basis for Drug Discovery**    668  
*Daniel B. Werz and Peter H. Seeberger*

12        **The Bicyclic Depsipeptide Family of Histone Deacetylase Inhibitors**    693  
*Paul A. Townsend, Simon J. Crabb, Sean M. Davidson, Peter W. M. Johnson, Graham Packham, and Arasu Ganesan*

**Part V      Expanding the Genetic Code**

13        **Chemical Informatics**    723

13.1      **Chemical Informatics**    723  
*Paul A. Clemons*

13.2      **WOMBAT and WOMBAT-PK: Bioactivity Databases for Lead and Drug Discovery**    760  
*Marius Olah, Ramona Rad, Liliana Ostopovici, Alina Bora, Nicoleta Hadaruga, Dan Hadaruga, Ramona Moldovan, Adriana Fulias, Maria Mracec, and Tudor I. Oprea*

**Volume 3**

**Part VI      Forward Chemical Genetics**

14        **Chemical Biology and Drug Discovery**    789

14.1      **Managerial Challenges in Implementing Chemical Biology Platforms**    789  
*Frank L. Douglas*

14.2      **The Molecular Basis of Predicting Druggability**    804  
*Bissan Al-Lazikani, Anna Gaulton, Gaia Paolini, Jerry Lanfear, John Overington, and Andrew Hopkins*

15        **Target Families**    825

15.1      **The Target Family Approach**    825  
*Hans Peter Nestler*

15.2      **Chemical Biology of Kinases Studied by NMR Spectroscopy**    852

*Marco Betz, Martin Vogtherr, Ulrich Schieborr, Bettina Elshorst, Susanne Grimme, Barbara Pescatore, Thomas Langer, Krishna Saxena, and Harald Schwalbe*

- 15.3 The Nuclear Receptor Superfamily and Drug Discovery 891  
*John T. Moore, Jon L. Collins, and Kenneth H. Pearce*
- 15.4 The GPCR – 7TM Receptor Target Family 933  
*Edgar Jacoby, Rochdi Bouhelal, Marc Gerspacher, and Klaus Seuwen*
- 15.5 Drugs Targeting Protein–Protein Interactions 979  
*Patrick Chène*
- 16 **Prediction of ADMET Properties** 1003  
*Ulf Norinder and Christel A. S. Bergstrom*
- Part VII Reverse Chemical Genetics Revisited**
- 17 **Computational Methods and Modeling** 1045
- 17.1 Systems Biology of the JAK-STAT Signaling Pathway 1045  
*Jens Timmer, Markus Kollmann, and Ursula Klingmüller*
- 17.2 Modeling Intracellular Signal Transduction Processes 1061  
*Jason M. Haugh and Michael C. Weiger*
- 18 **Genome and Proteome Studies** 1083
- 18.1 Genome-wide Gene Expression Analysis: Practical Considerations and Application to the Analysis of T-cell Subsets in Inflammatory Diseases 1083  
*Lars Rogge and Elisabetta Bianchi*
- 18.2 Scanning the Proteome for Targets of Organic Small Molecules Using Bifunctional Receptor Ligands 1118  
*Nikolai Kley*
- Part VIII Tags and Probes for Chemical Biology**
- 19 **Chemical Biology – An Outlook** 1143  
*Gunther Wess*
- Index** 1151
