

CONTENT

Part I. Introduction	1
1. How Does a Small Protein Become So Popular?: A Succinct Account of the Development of Our Understanding of Cytochrome C	3
2. Evolution and Classification of c-Type Cytochromes	33
Part II. Structural Studies	101
3. Structural Studies of Eukaryotic Cytochromes c	103
4. Cytochrome c Folding and Stability	167
Part III. Spectroscopic Properties	201
5. Nuclear Magnetic Resonance Studies of Class I Cytochromes c	203
6. Resonance Raman Spectroscopy of Cytochrome c	285
Part IV. Thermodynamic Properties	315
7. Direct Electrochemistry of Cytochrome c	317
8. Oxidation State-Dependent Properties of Cytochrome c	335
9. Electrostatic Analysis of Cytochrome c	347
10. Differential Protection Techniques in the Analysis of Cytochrome c Interaction with Electron Transfer Proteins	373
11. The Immunology of Cytochrome c	397
12. Apo-and Holocytochrome c-Membrane Interactions	449
Part V. Electron Transfer Kinetics	473
13. Steady-State Electron Transfer Reactions Involving Cytochrome c	475
14. Kinetics of Electron Transfer of c-Type Cytochromes with Small Reagents	489
15. Long-Range Intramolecular Electron Transfer Reactions in Cytochrome c	515
16. Theoretical Simulation of Protein-Protein Interactions	543
Part VI. Modification of Cytochrome c	571
17. Chemical Modification of Surface Residues on Cytochrome c	573
18. Covalent Modification and Cross-Linking of Cytochrome c with Metal Complexes	593
19. The Alkaline Transition in Ferricytochrome c	611
20. The Hemepeptides from Cytochrome c: Preparation, Physical and Chemical Properties, and Their Use as Model Compounds for the Heme proteins	635
21. Semisynthesis of Cytochrome c Derivatives and Noncovalent Complexes	693
Complexes	693
Index	729
