

CONTENTS

METABOLISM

The synthesis of fatty acids in animal tissues.	3
Biosynthesis and distribution of unsaturated fatty acids	29
Synthesis of triglycerides	33
Recent advances in the study of sterol biosynthesis	45
Biosynthesis of phospholipids and glycerides,	71
Biosynthesis of glycolipids	95
Biosynthesis of branched-chain fatty acids of mycobacteria	111
Biosynthesis of long-chain fatty acids in higherplants,	125
Further studies on pig pancreatic lipase.	141
The specificity of phospholipases.	155
Physicochemical aspects of phospholipase action.	179
Metabolism of phosphoinositides.	197
Metabolism of plasmalogens.	205

LIPID ABSORPTION

Lipid absorption –physicochemical considerations	221
Lipid metabolism in intestinal mucosa.	229
Resynthesis and transport of long-chain fatty acids by the small gut	243
Intestinal absorption and clearance of lipids in ruminants and nonruminants.	257

PHYSIOLOGICAL SIGNIFICANCE

Physiological significance of the plasma triglycerides in fat transport	275
Plasma free fatty acids.	289
The role of lipids in blood coagulation	325
Aspects of lipid metabolism in ruminants	335
Biosynthesis of milk lipids	351
Lipids of intracellular organelles	369
Lipids of animal cell membranes	383
Lipids of bacterial membranes.	399
The physical structure of phospholipids in salt solution	413
Interconversions of phosphatidylinositol and phosphatidic acid involved in the response to acetylcholine in the Salt gland	423
The nutritional aetiology of fatty liver	435
Fatty liver induction by toxic agents	443
Aspects of the endocrine regulation of lipid metabolism	455
Effects of drugs on the metabolism of phospholipids	481
Phagocytosis and lipid metabolism.	501

LIPIDS OF THE NERVOUS SYSTEM	
Biosynthesis of lipids of the nervous system	511
Myelin metabolism	527
Lipolytic enzymes and demyelination	541
Lipidoses	553
LIPIDS AND PROTEINS	
Association of lipids with proteins	571
Role of lipid in mitochondrial function	581
SYMPOSIA	
Fatty acid composition	621
Techniques	633
INDEX	653
