

CONTENT

1. Electromagnetic-Field Interaction with Biological Systems in the Microwave and Far-Infrared Region: Physical Basis	1
2. Dielectric properties of Water in the Microwave and Far-Infrared Regions	47
3. Dielectric Properties of Water in Myoglobin Solution	57
4. Electrical Response of Polymers in Solution	63
5. Spectroscopic Determination of the Low-Frequency Dynamics of Biological Polymers and Cells	83
6. Long-Range Forces in DNA	95
7. Calculated Microwave Absorption by Double-Helical DNA	101
8. Dielectric Properties of Biological Tissue and Biophysical Mechanisms of Electromagnetic-Field Interaction	109
9. Frequency Response of Membrane Components in Nerve Axon	133
10. A Perturbation Model for Electromagnetic-Field Interaction with Excitable Cellular Membranes	147
11. Developmental Bioelectricity	163
12. Coherent Processes in Biological Systems	213
13. Coherent Modes in Biological Systems: Perturbation by External Fields	219
14. The Response of Biochemical Reaction Systems to Oscillating Stimuli	243
15. Nonlinear Impedance and Low-Frequency Dispersion Effects of a Polyelectrolyte Under High Sinusoidal Fields	255
16. Ionic Nonequilibrium Phenomena in Tissue Interactions with Electromagnetic Fields	271
17. Calcium Ion Efflux induction in Brain Tissue by Radiofrequency Radiation	299
18. The Microwave Hearing Effect	317
Index	331
