574.191 5 HOL V.1 Pt.1

CONTENT

1. Principles of Radiological Physics	1
2. The Measurement of Ionizing Radiations for Biological Purposes	145
3. Physical Principles Underlying Photochemical, Radiation-Chemical, and Radiobiological Reactions	191
4. Basic Radiation Biochemistry	255
5. The Effect of X Rays on Systems of Biological Importance	283
6. The Radiobiological Importance of Linear Energy Transfer	315
7. The Nature of the Genetic Effects Produced by Radiation	351
8. The Manner of Production of Mutations by Radiation	475
9. Chromosome Aberrations Induced in Animal Cells by Ionizing Radiations	627
10. Radiation-induced Chromosome Aberrations in Tradescantia	713
11. Immediate Effects on Division, Morphology and Viability of the Cell	763
12. Genetic Effects of Radiation in mammals	825
13. The Effects of Radiation on Mammalian Prenatal Development	861
14. The Pathological Physiology of Radiation Injury in the Mammal. I. Physical and Biological Factors in Radiation Action	919
15. The Pathological Physiology of Radiation Injury in the Mammal. II. Specific Aspects of the Physiology of Radiation injury	959
16. The Hematologic Effects of Ionizing Radiation	1029
17. Histological Changes After Irradiation	1091
18. Carcinogenesis by Ionizing Radiations	1145
NAME INDEX	1203
SUBJECT INDEX	1229
