

CONTENT

Chapter		
1	The Warburg Constant Volume Respirometer	1
2	Carbon Dioxide and Bicarbonate	18
3	Direct and Indirect Methods for Carbon Dioxide	28
4	Calibration of Respirometers	46
5	Useful Techniques in Manometry	61
6	The Differential Respirometer and its Application to Studies of Photosynthesis, Respiration, and Fermentation	77
7	Special Methods Employing Manometric and Electrometric Techniques	91
8	Methods for Preparation and Study of Tissues and Enzymes	114
9	The Homogenate Technique	159
10	Methods for the Isolation of Particulate Components of the Cell	177
11	Manometric and Chemical Estimation of Metabolites and Enzyme Systems	193
12	Spectrophotometry	216
13	Design of Chromatographic Procedures	233
14	Preparation of Physiologically Important Intermediates and Metabolites	261
	References	275
	Index	291
