

## CONTENT

1. Current Status and Future Challenges of High-Performance Liquid Chromatographic Techniques for Biopolymer Analysis and Purification	1
2. Sample Presentation and Column Hygiene	37
3. Development of Advanced Silica-Based Packing Materials	59
4. High-Performance Agarose-Based Chromatographic Media and Their Application in Biopolymer Separation	119
5. The Development of High-Performance Multimode and Mixed-Mode Polyethyleneimine-Based Chromatographic Media	149
6. Comparative Performance of Silica-Based Adsorbents for Ion-Exchange and Hydrophobic-Interaction Chromatography	177
7. High-Performance Ion-Exchange Chromatography of Proteins	199
8. Reversed-Phase and Hydrophobic-Interaction Chromatography of Proteins	247
9. Optimization and Prediction of Peptide Retention Behavior in Reversed-Phase Chromatography	277
10. Multidimensional, Microscale HPLC Technique in Protein Sequencing	307
11. Optimization of Protein Separations on Multimodal Chromatographic Supports	331
12. Protein-Protein Interactions Studied by Chromatography	397
13. Preparative Dye-Ligand Chromatography	453
14. Application of High-Performance Affinity Chromatographic Techniques	469
15. Stationary and Mobile Phase Effects in High-Performance Liquid Chromatography Of Protein Hormones	495
16. HPLC Purification of Detergent-Solubilized Membrane Proteins	555
17. Purification of Viral Proteins	573
18. HPLC Purification of Monoclonal Antibodies	599
19. Application of High-Performance Liquid Chromatography to the Determination of Physiological Amino Acids	625
20. HPLC of Oligonucleos	665
21. HPLC of Plasmids, DNA Restriction Fragments, and RNA Transcripts	689
22. Separation of Proteins and Peptides by High-Performance Capillary Electrophoresis: A Versatile Analytical and Micropreparative Method	737
Index	771
