

CONTENT

Chapter 1 A Critical Evaluation of Sensitive Amino Acid Analysis	2
Chapter 2 New Approaches for the Chemistry of the Edman Degradation	34
Chapter 3 New Instrumentation in Sequence Analysis and Synthesis of Biopolymers	61
Chapter 4 C-terminal Sequence Analysis Alternative Techniques to the Stepwise Edman Degradation	129
Chapter 5 New Instrumentation and Approaches in Mass Spectrometry of Biopolymers	175
Chapter 6 HPLC Purification of Proteins and Peptides for Microsequence Analysis: Recovery of Proteins from Gels	220
Chapter 7 New Strategies of Protein and Peptide Characterization	302
Chapter 8 Organization of an International Protein DATA Base; Evaluation of Software: Computer Assisted Search and Comparison of Sequences	357
Chapter 9 Protein Folding and Three-dimensional Structure Elucidation of Proteins : Theoretical And Practical Approaches	370
Chapter 10 Recombinant DNA-Technology as Tool for Protein Sequence and Activity Relationship	407
Chapter 11 Domain Substructure Analysis and Interaction of Biomolecules	440
Chapter 12 Immunological Recognition and Strategies	476
Chapter 13 Analysis of Membrane Proteins	502
CONCLUDING REMARKS AND OUTLOOK	
Protein Chemistry Renascent	531
Protein Chemistry and the Biotechnology of the Future	536
Contributors Index	554
Subject Index	558
