

CONTENT

1 Introduction to Bioinorganic Chemistry	1
2 Introduction to Homogeneous Catalysis	11
3 Relationships Between Enzymatic and Heterogeneous Catalysis	21
4 Oxidative Polymerization of Phenols and Thiophenols Catalyzed	29
5 Catalysis by Nitrogenases and Synthetic Analogs	89
6 Catalysis by Molybdenum-Cofactor Enzymes	131
7 Catalysis by Nickel in Biological Systems	189
8 The Two B-12 Cofactors: Involvement of the Cobalt Center in Homolytic and Heterolytic Processes	227
9 Formation, Structure, and Reactivity of Copper Dioxygen Complexes	261
10 Polynuclear Manganese Enzymes	317
11 Oxygen Activation at Nonheme Iron Centers	347
12 Dioxygen Activation at Heme Centers in Enzymes and Synthetic Analogs	395
13 Vanadium Bromoperoxidase	425
14 Metalloenzymes with a Quinone Cofactor	447
15 Future Developments	469
Index	475
