## 574.1925 ENZy

## CONTENT

| 1. Principles of enzsyme assay and kinetic studies       | 1   |
|--|-----|
| 1. Introduction  | 1   |
| 2. Behaviour of assays                                   | 1   |
| 3. The effects of enzyme concentration                   | 19  |
| 4. Expression of enzyme activity                         | 23  |
| 5. The effects of substrate concentration                | 25  |
| 6. Experimental approaches                               | 36  |
| 2. Photometric assays                                    | 59  |
| 1. Introduction  | 59  |
| 2. Absorption  | 59  |
| 3. Turbidimetry  | 82  |
| 4. Fluorescence  | 83  |
| 3. Radiometric assays                                    | 93  |
| 1. Introduction  | 93  |
| 2. Techniques  | 95  |
| 3. Experimental design                                   | 108 |
| 4. Problems and pitfalls                                 | 112 |
| 5. Automation of assays                                  | 114 |
| 6. The advantages of radiometric methods of enzyme assay | 118 |
| Acknowledgements   | 119 |
| References   | 120 |
| 4. High performance liquid chromatographic assays        | 123 |
| 1. Introduction  | 123 |
| 2. Theory of HPLC  | 124 |
| 3. Retention mechanism                                   | 127 |
| 4. Instrumentation                                       | 136 |
| 5. Detectors   | 139 |
| 6. Practical considerations                              | 145 |
| 7. Application of HPLC to enzymatic analysis             | 148 |
| References   | 164 |
| 5. Electrochemical assays: polarography                  | 167 |
| 1. Introduction  | 167 |
| 2. Polarographic principles                              | 168 |
| 3. Polarographic techniques                              | 168 |
| 4. Polarographic enzyme assays                           | 174 |
| References   | 178 |

| 6. Electrochemical assays: the oxygen electrode   | 181 |
|---|-----|
| 1. Introduction   | 181 |
| 2. Theory and principles  | 181 |
| 3. Current/voltage relationships  | 182 |
| 4. Sensitivisty   | 182 |
| 5. Calibration  | 183 |
| 6. Electrode systems  | 185 |
| 7. Polarographic assays   | 186 |
| References  | 190 |
| 7. Electrochemical assays: the pH-stat  | 191 |
| 1. Introduction   | 191 |
| 2. Principles and theoretical basis of pH-stat methodology                                  | 192 |
| 3. Commercial and custom-made pH-stat assemblies: automation, computer control, and special |     |
| applications  | 194 |
| 4. General pH-stat procedure and chemical principles and experimental protocols for some    |     |
| individual enzymes  | 199 |
| 5. A systematic error in pH-stat assays of enzymes in haemolysates                          | 213 |
| 6. Concluding comment   | 214 |
| Acknowledgements  | 214 |
| References  | 214 |
| 8. Detection of enzymatic activity after polyacrylamide gel electrophoresis and agarose get |     |
| isoelectric focusing  | 217 |
| 1. Introduction   | 217 |
| 2. Preparation of sample and material   | 218 |
| 3. Preparation of slab gels for zymography  | 220 |
| 4. Gel formulations   | 223 |
| 5. Eletrophoresis   | 227 |
| 6. Staining   | 228 |
| 7. Troubleshooting the electrophoresis  | 229 |
| 8. Preparation of electrophoretically-separated enzymes for detection                       | 230 |
| 9. Blotting /elution/renaturation   | 230 |
| 10. Detection of enzymes in gels  | 235 |
| 11. Practical examples for enzyme detection   | 237 |
| 12. Other enzymology-after-electrophoresis techniques                                       | 250 |
| Acknowledgement   | 251 |
| References  | 251 |
| 9. Techniques for enzyme extraction   | 255 |
| 1. Introduction: scope of chapter   | 255 |
| 2. Disruption of tissues and cells  | 256 |
| 3. Protection of enzyme activity  | 262 |

| 4. Assays of enzymes in unfractionated cell-extracts                       | 268 |
|--|-----|
| 5. Assays of enzymes in unfractionated cell-extracts                       | 268 |
| 6. In situ assays using permeabilization techniques                        | 271 |
| 7. Concluding remarks  | 273 |
| References   | 273 |
| 10. Statistical analysis of enzyme kinetic data                            | 277 |
| 1. Introduction  | 277 |
| 2. Preliminary considerations  | 278 |
| 3. General strategy for determination of Km and Vmax                       | 281 |
| 4. Calculation of Km and Vmax using graphs                                 | 286 |
| 5. Calculation of Km and Vmax using computerized least-squares-fit methods | 291 |
| 6. Multi-substrate reactions   | 297 |
| 7. Inhibition and the determination of the inhibitor constant (Ki values)  | 302 |
| 8. Uses for the standard deviations  | 305 |
| 9. The analysis of Hill plots  | 312 |
| Acknowledgements   | 313 |
| References   | 313 |
| 11. Buffers and the determination of protein concentrations                | 317 |
| 1. Introduction  | 317 |
| 2. Buffers and pH  | 317 |
| 3. Methods for protein determination                                       | 326 |
| References   | 334 |
| Appendix Suppliers of specialist items                                     | 337 |
| Enzyme index   | 343 |
| Subject index  | 347 |
