

CONTENT

KEYNOTE ADDRESS

- | | |
|--|---|
| 1. Aggregation of Red Blood Cells: An Electrochemical and Colloid Chemical Problem | 3 |
|--|---|

SURFACE INTERACTIONS

- | | |
|---|-----|
| 2. Measurement of the Adsorption of Ca^{2+} and Mg^{2+} to Phosphatidyl Choline Bilayers | 41 |
| 3. The Adsorption of Alkaline Earth Cations to Phosphatidyl Choline Bilayer Membranes: A Unique Effect of Calcium | 49 |
| 4. Electrical Properties of Membrane Systems: On Mechanisms of Interaction of Ca^{++} with Dipalmitoyl Lecithin at the Air-Water Interface | 57 |
| 5. Effect of Cation Concentrations and Temperature on the Rates of Aggregation of Acidic Phospholipid Vesicles: Application to Fusion | 75 |
| 6. The Influence of Extremely Small Attractive as Well as of Repulsive van der Waals-London Forces on Cell Interactions | 107 |

MACROMOLECULES

- | | |
|--|-----|
| 7. Interaction of Prothrombin and Ca^{++} with Phospholipid Monolayers Containing Phosphatidyl Serine | 117 |
| 8. Enzymatic Clotting Process. IV. The Chymosin-Triggered Clotting of p-(k)-Casein | 129 |
| 9. Electrochemical Basis of Heparin-Induced Red Blood Cell Aggregation | 143 |
| 10. Ion-Binding Effects on Diffusion of Reversibly Dissociating Lobster Hemocyanin | 151 |
| 11. The Effect of Bulk Solvent Structure and Specific Ion Binding on the Temperature Dependence of the Reduction Potential of Horse Heart Cytochrome c | 169 |
| 12. Hemoglobin Oxygenation as a Problem in Surface Electrochemistry | 187 |

MEMBRANE PROCESSES

- | | |
|--|-----|
| 13. Transmembrane pH and Electrical Gradients: Evaluation and Possible Role in Oxidative Phosphorylation | 195 |
| 14. Displacement Photocurrents in Pigment-Containing Biomembranes: Artificial and Natural Systems | 211 |
| 15. A Surface Chemical Model of Salt, Acid, and "Water" Taste | 239 |
| 16. The Modulation of Synaptic Membrane Excitability by Cholesterol | 261 |
| 17. Increased Ionization of Catecholamines in the Presence of Imidazole and Related Compounds | 273 |
| 18. Protein Phosphorylation and Bioelectrogenesis | 285 |
| 19. The Permeability of Adsorbed-and Spread-Membrane Protein (Spectrin-Actin) Films to Ions | 299 |
| 20. Influence of Fluxes on Stationary-State Electric Potential and Concentration Profiles | 313 |

CELLS AND TISSUES

21. Membrane Impedance as a Probe for Interfacial Electrochemical Control of Living Cell Function	339
22. Nonequilibrium Processes in Binding and Release of Brain Calcium by Low-Level Electromagnetic Fields	361
23. Direct Cell-to-Cell Channels: The Basis of Junctional Coupling as Shown by Electrical and Tracer Studies	379
24. The Cell-to-Cell Membrane Channel: Permeability and Its Regulation	391
25. The Influence of the Composition of the Bathing Solutions on Frog Skin Membrane Potential	409
26. Destruction of the Electrophysiological Potential of Excised Frog Skin by Surfactants	445
27. Impedance of Living Cell Membranes in the Presence of Chemical Tissue Fixative	461
28. A Role for Water in Growth, Metabolism, and Intracellular Organization	485
Index	499
