

## CONTENT

CHAPTER 38 Metabolism of Amino Sugars	
I. Energy-Utilizing Reactions	2
II. Pathways of Degradation	32
CHAPTER 39 Metabolism of Glycosaminoglycans	
I. Metabolism of Moieties	46
II. Formation of Macromolecules	57
III. Formation of Individual Glycosaminoglycans	62
IV. Catabolism	77
CHAPTER 40 Metabolism of Glycoproteins, Glycopeptides, and Glycolipids	
I. Metabolism of Glycoproteins	81
II. Metabolism of Glycolipids	119
III. General Comments	127
CHAPTER 41 Effect of Steroid Hormones on the Glycosaminoglycans of Target Connective Tissues	
I. Rooster Comb	129
II. Sexual Skin	142
III. Other Target Connective Tissues	147
IV. Glycosaminoglycans and the Target Reaction	151
CHAPTER 42 Hexosaminidases	
I. $\beta$ -N-Acetylhexosaminidase	156
II. $\alpha$ -N-Acetylhexosaminidase	167
CHAPTER 43 Neuraminidases	
I. Occurrence	171
II. Isolation, Purification, and Assay	172
III. Properties	173
CHAPTER 44 Enzymes Degrading Glycosaminoglycans	
I. Enzymes Degrading Chitin	181
II. The Action of Lysozyme	182
III. Enzymic Degradation of Hyaluronic Acid, Chondroitin, and Chondroitin Sulfates	184
IV. Enzymic Degradation of Dermatan Sulfate	196
V. Enzymic Degradation of Heparan Sulfate and Heparin	198
VI. Enzymic Degradation of Keratan Sulfate	198
VII. The Action of $\beta$ -Glucuronidase on Glycosaminoglycans	198
CHAPTER 45 Sulfatases of Glycosaminoglycans	
I. Desulfation of Sulfated Glycosaminoglycans	201
II. Desulfation of Sulfated N-Acetylhexosamines	208
III. Enzymic Desulfation in Mammals	209

CHAPTER 46 Activation and Inhibition of Enzymes by Polyanions Containing Amino Sugars	
I. Activation	214
II. Inhibition	223
CHAPTER 47 Chemical and Physical Changes of Glycosaminoglycans and Glycoproteins Caused by Oxidation-Reduction Systems and Radiation	
I. Oxidation –Reduction Systems	229
II. Radiation	238
CHAPTER 48 Interaction of Polyanions with Blood Components	
I. Nonspecific Protein-Polyanion Complexes	252
II. Specific Complexes Between Polyanions and Certain Proteins	253
III. Interaction of Polyanions with Blood Components as Observed by Physiological Changes	261
CHAPTER 49 Immunochemistry	
I. Blood Group Substances	269
II. Hormones	300
III. Glycoproteins in Body Fluids	303
IV. Amyloid	309
V. Gangliosides and Related Lipids	310
VI. Glycoproteins of Hen Egg White	311
VII. Gestilizin an Antifertilizin	312
VIII. Microbial Polysaccharides	312
IX. Substances of Viruses and Rickettsiae With Potential Antigenicity	328
X. Fungi	329
XI. Protozoa	330
XII. Macromolecular Compounds Without Known Antigenic Properties	330
XIII. Immunochemistry in Amino Sugar Research	332
CHAPTER 50 Interaction between Glycoproteins and Viruses	
I. Interaction Between Influenza Virus and Cellular Receptor	337
II. Soluble Glycoproteins as Receptor Analogues: Their Composition, Structure, and Inhibitory Capacity, and Enzymatic Inactivation	340
III. The Mode of Action Of Influenza Virus and RDE on Inhibitory and Noninhibitory Glycoproteins	
IV. Definition In Structural Terms of A Glycoprotein Inhibiting Viral Hemagglutination	353
V. Association Between Some Other Viruses and Hexosamine-Containing Substances	355
VI. Inactivation of Hormonal Glycoproteins by Viral and Bacterial Neuraminidases	356
CHAPTER 51 Interaction of Amino Sugars and Amino Sugar-Containing Macromolecules with Viruses, Cells, and Tissues	
Introduction	361
I. Viral and Bacterial Growth	361
II. Pseudopodium Formation in Amoeba	366
III. Fertilization, Growth, And Wound Healing	367
IV. Animal Metabolism	377

V. Neoplastic Transformation and Growth	380
Bibliography and Author Index	399
Subject Index	488
