

CONTENT

CHAPTER 1 Introduction	
I. Protein Structure, Polypeptide Chains and Prosthetic Groups	2
II. General Considerations of Protein Biosynthesis	7
III. Nucleic Acids and Protein Synthesis	11
IV. Correlations Between Protein Synthesis and Morphology	44
V. Intracellular Degradation of Proteins	55
VI. control of Protein Synthesis	56
References	58
CHAPTER 2 Methodological Aspects of Protein Synthesis in Mammalian Systems	
I. Introduction	65
II. Techniques for the Determination of Radioactivity in Proteins	66
III. Incorporation of Isotopic Amino Acids into Protein In Vivo	72
IV. Incorporation of Isotopic Amino Acids into Proteins in Vitro Systems	80
V. Conclusions	122
CHAPTER 3 Biosynthesis of Specific Proteins in Mammalian Systems	
I. Introduction	133
II. Biosynthesis of Haemoglobin	136
III. Biosynthesis of Proteins in Liver	157
IV. Biosynthesis of Proteins in Mammary Gland	188
V. Biosynthesis of Proteins in Pancreas	195
VI. Biosynthesis of Proteins in Oviduct	203
VII. Conclusions	210
References	211
CHAPTER 4 THE BIOCHEMISTRY OF THE GENETIC CODE	
I. Introduction	218
II. Methods	219
III. Amino Acid Incorporation into Peptides	227
IV. Amino Acyl-sRNA Binding to Ribosomes Stimulated by Trinucleotides	245
V. The Wobble Hypothesis (Crick, 1966)	247
VI. On Allocating Triplets to Amino Acids	250
VII. Summary of Data on the Genetic Code	251
VIII. Chain Initiation	254
IX. The Direction of Reading mRNA	255

XI. The Other Genetic Code-activating Enzyme Recognition of sRNA	259
References	259
CHAPTER 5 Isolation of Ribonucleic Acids for Studies in Protein Biosynthesis	
I. Introduction	265
II. transfer RNA	267
III. Ribosomal RNA	275
IV. Messenger RNA	283
APPENDIX	
Miscellaneous Techniques	299
Author Index	313
Subject Index	327
