

CONTENT

1.	The Nature and Origin of the Serum Proteins	1
2.	Dominant Role of the Liver in Biosynthesis of the Plasma Proteins with Special Reference to the Plasma Mucoproteins (Seromuroid), Ceruloplasmin, and Fibrinogen	17
3	Protein Biosynthesis-Aminoacyl Transfer from sRNA to Ribosomes	41
4	Refractive Indices of Amino Acids, Proteins, and Related Substances	54
5	Conversion of Proline to Hydroxyproline in Collagen Synthesis	67
6	The Administration of Radioactive L-Cystathionine to a Human Cystinuric	82
7	Methionine Sulfoxide and Other Combined Amino Acids in the German Cockroach	85
8	Amino Acid Transport in Bacteria-Effect of Nutritional and Physiological Factors	96
9	Differential Responses to Amino Acids in Bacterial Growth	118
10	Biosynthesis and utilization of Acetyl Phosphate, Formyl Phosphate, and Carbamyl Phosphate and their Relations to the Urea Cycle	128
