

## CONTENT

	<b>Page</b>
<b>Part One Body Fluids and Their Constituents</b>	<b>3</b>
<b>1. Blood</b>	
Blood, Lymph, and the circulatory system	3
Composition of blood plasma	4
Plasma proteins	5
Blood clotting	17
Regulation of blood coagulation	35
<b>2. The Immune System</b>	<b>38</b>
General considerations	38
Immunoglobulins	40
The origin of antibody diversity	49
The formation of immunoglobulin genes	55
The complement system	59
Leukocytes: phagocytosis and inflammation	66
<b>3. The Erythrocyte</b>	<b>71</b>
The erythron	72
Erythrocyte structure	73
Metabolism of the erythrocyte	80
Bile pigments	82
Iron metabolism	87
Erythrocyte abnormalities	93
<b>4. Hemoglobin and the Chemistry of Respiration</b>	<b>100</b>
The respiratory gases	100
The structure of hemoglobin	103
The reactions of hemoglobin with oxygen, carbon dioxide, protons, and 2,3-diphosphoglycerate	113
Mechanism of hemoglobin action	118
Oxygen transport	122
Transport of CO <sub>2</sub>	122
Molecular pathology of abnormal hemoglobins	130
Comparative biochemistry of respiratory proteins	137
<b>5. Body Fluids, Electrolytes, and Acid-Base Balance: The Kidney</b>	<b>141</b>
Fluid compartments of the body	142
Specialized body fluids	148
Control of the behavior of extracellular fluid	157
Control of the pH of body fluids	174
Aspects of renal function	189
Nature and composition of urine	199
Abnormal constituents of urine	203
Urinary lithiasis	205
Endocrine function of the kidney	205
<b>Part Two Specialized Tissues</b>	
<b>6. Connective Tissue</b>	<b>211</b>
Collagen	211
Elastin	225
Other fibrous proteins	226
Proteoglycans	228
Fibronectin; other proteins of the extracellular matrix	239

<b>7. The Nervous System</b>	<b>243</b>
Conduction of the nervous impulse	245
Transmission of the nervous impulse: the synapse	249
Aspects of nervous tissue composition	261
Metabolism of the brain	266
<b>8. Muscle</b>	<b>273</b>
An overview of muscle contraction	273
The contractile system	274
The role of ATP in contraction	280
The mechanism of contraction	282
Sources of energy for muscular work	290
Cilia and flagella	294
<b>9. The Eye</b>	<b>296</b>
Structure, composition, and metabolism	296
Photochemistry of vision	300
Origin of the nervous impulse	305
Cone vision	307
<b>10. The Gastrointestinal Tract: Digestion, Absorption, Hormonal Regulation</b>	<b>309</b>
Secretions of the digestive tract	310
Digestion and absorption	322
Hormonal control of gastrointestinal secretion	341
<b>Part Three Biochemistry of the Endocrine Systems</b>	
<b>11. General Principles Concerning the Nature and Actions of Hormones</b>	<b>355</b>
Hormones	355
Feedback regulation	358
Biosynthesis	361
Storage	363
Secretion	363
Circulation in blood	363
Degradation and peripheral transformation	364
Receptors and the mechanism of hormone action	365
Measurement of hormones	365
Disordered endocrine function	368
<b>12. Mechanisms of Hormone Action</b>	<b>371</b>
Receptors and biological response	371
The plasma membrane: transducer of extracellular messages	375
Cyclic AMP : a second messenger to hormone action	376
Calcium	386
Steroid hormone action	388
<b>13. Prostaglandins and Related Agents</b>	<b>393</b>
Chemistry of the prostaglandins and thromboxanes	394
Biosynthesis of prostanoids: the cyclooxygenase pathway	397
Metabolism	402
Biological actions of prostaglandins, prostacyclins, and thromboxanes	403
Products of the lipoxygenase pathway; leukotrienes	411
<b>14. The Thyroid</b>	<b>416</b>
Thyroglobulin	416
Biosynthesis and secretion of iodine-containing thyroid hormones	418
Metabolic fate of thyroxine and triiodothyronine	425
Actions of thyroid hormones	427
Regulation of thyroid hormone synthesis and secretion	432
Antithyroid agents	433
Thyroid hypofunction and hyperfunction	436

15. Bone and the Hormonal Control of Calcium and Phosphate Metabolism: Parathyroid Hormone, Calcitonin, Vitamin D	441	
Calcium and Phosphate metabolism		441
Bone		446
Teeth		452
Hormonal control of calcium and phosphate metabolism		453
Parathyroid hormone		453
Calcitonin		458
Vitamin D		461
Disorders of calcium and phosphate metabolism and metabolic bone disease		467
<b>16. The Pancreatic Islets</b>		<b>474</b>
Organization of islet cells		474
Insulin		476
Glucagon		491
Somatostatin		494
Pancreatic polypeptide		495
<b>17. Gonads</b>		<b>498</b>
Steroid hormones		498
The testes: androgens		499
The ovaries: estrogens and progesterone		513
Progesterone: hormone of the corpus luteum		522
Mechanism of progesterone action		523
<b>18. The Adrenals</b>		<b>528</b>
The adrenal medulla: epinephrine and norepinephrine		528
The adrenal cortex		542
<b>19. The Thymus</b>		<b>568</b>
The thymus as an endocrine gland		568
Thymic hormones		569
Interrelationships of the thymus and other endocrine glands		572
<b>20. Hypothalamus, Hypophysis, and Pineal Gland</b>		<b>575</b>
Organization of hypothalamus and hypophysis		575
Hypophyseal releasing and inhibiting factors		577
The adeno-hypophyseal hormones		579
Adrenocorticotropin and related peptides		579
The glycoprotein hormones		587
Growth promoting and lactogenic hormones		600
Hormones of the neurohypophysis		613
Chemistry		613
The pineal gland: melatonin		619
<b>Part Four Nutrition</b>		
<b>21. The Major Nutrients</b>		<b>625</b>
Assay animals		626
Human nutritional requirements		627
<b>22. The Water-Soluble Vitamins</b>		<b>641</b>
Terminology		641
Thiamine		642
Riboflavin		644
Nicotinic acid, or niacin		647
Vitamin B <sub>6</sub> (pyridoxine)		650
Pantothenic acid		653
Biotin		654
Folic acid (folacin)		656
Vitamin B <sub>12</sub>		659

Inositol	664
Choline	665
Ascorbic acid	666
<b>23. The Lipid-Soluble Vitamins</b>	<b>669</b>
Vitamin A	669
Vitamin D	674
Vitamin E	676
Vitamin K	681
Concluding remarks on human nutrition	683
<b>Index</b>	<b>689</b>
