PART ONE Chemical Composition of Cells	
1. GENERAL CONSIDERATIONS	1
2. CHEMISTRY OF CARBOHYDRATES Classification, Formulation, and Stereochemistry	5
3. CHEMISTRY OF CARBOHYDRATES Monosaccharides	22
4. CHEMISTRY OF CARBOHYDRATES Oligosaccharides and Polysaccharides	43
5. CHEMISTRY OF LIPIDS Fatty Acids, Fats, Phosphatides, and Related Substances	61
6. CHEMISTRY OF LIPIDS Terpenes and Steroids	80
7. THE PROTEINS Amino Acids and Peptides	91
8. THE PROTEINS Chemical and Physical Properties	120
9. THE PROTEINS Structure	142
10. NUCLEIC ACIDS AND NUCLEOPROTEINS	162
11. PORPHYRINS, HEMOPROTEINS, AND CHLOROPHYLL	187
PART TWO Catalysis	
12. ENZYMES Nature and Classification	204
13. ENZYMES Kinetics, Inhibition, and Metabolic Inhibitors	219
14. ENZYMES Specificity and Mechanism of Action	241
PART THREE METABOLISM	
15. INTRODUCTION TO METABOLISM	263
16. GENERAL METABOLISM Energy Considerations	280
17. BIOLOGICAL OXIDATIONS Oxidation-Reduction Reactions, Phosphate Bond Energy	293
18. BIOLOGICAL OXIDATIONS Citric Acid Cycle. The Mitochondrion, Electron Transport. Oxidative Phosphorylation	311

19. BIOLOGICAL OXIDATIONS	337
Oxidative Enzymes, Coenzymes, and Carriers	
20. CARBOHYDRATE METABOLISM	362
Digestion and Absorption, Glycolysis. The Phosphogluconate Oxidative Pathway. Photosynthesis	
21. CARBOHYDRATE METABOLISM	401
Hexose Interconversions. Polysaccharides. Regulation of Blood Glucose	
22. LIPID METABOLISM	429
Digestion and Absorption. Degradation and Synthesis of Neutral Fats. Mobilization And Deposition. Ketone Bodies and Ketosis	
23. LIPID METABOLISM	463
Phosphatides and Sterols	
24. AMINO ACID METABOLISM	483
Digestion of Protein and Absorption of Amino Acids. Utilization of Inorganic Nitrogen. General Aspects of Amino Acid Biosynthesis. Essential Amino Acids. Biosynthesis of Nonessential Amino Acids. Dynamic Aspects of Mammalian Nitrogen Metabolism.	
25. AMINO ACID METABOLISM	515
Biosynthesis of Essential Amino Acids	
26. AMINO ACID METABOLISM	527
Amino Acids as Precursors of Some Nitrogenous Compounds	
27. AMINO ACID METABOLISM	539
Metabolic Fates of Amino Acids	
28. METABOLISM OF PURINES, PYRIMIDINES, AND NUCLEOTIDES	558
29. GENETIC ASPECTS OF METABOLISM	584
Nature of the Gene and Its Replication. The Coding Problem and Protein Structure	
30. GENETIC ASPECTS OF METABOLISM	598
Biosynthesis of Protein and RNA	
31. GENETIC ASPECTS OF METABOLISM	611
Variation of Protein Structure. Control of Protein Synthesis. Hereditary Disorders of Metabolism	
PART FOUR Body Fluids	
32. BLOOD PLASMA	627
33. BLOOD CLOTTING	647
34. CHEMISTRY OF RESPIRATION	656
35. ELECTROLYTE, WATER, AND ACID-BASE BALANCE	673
36. SPECIALIZED EXTRACELLULAR FLUIDS	701
37. RENAL FUNCTION AND THE COMPOSITION OF URINE	724
PART FIVE Biochemistry of Specialized Tissues	
38. MUSCLE	744

39. NERVOUS TISSUE	755
40. CONNECTIVE TISSUE	767
41. BONE; CALCIUM AND PHOSPHORUS METABOLISM	777
42. THE ERYTHROCYTE AND IRON METABOLISM	788
43. THE EYE	812
44. SKIN	822
PART SIX Biochemistry of the Endocrine Glands	
45. GENERAL CONSIDERATIONS OF THE ENDOCRINE GLANDS	825
46. THE THYROID	830
47. THE PARATHYROIDS	844
48. THE GONADS	850
49. THE ADRENALS	868
50. THE PANCREAS	890
51. THE HYPOPHYSIS	899
PART SEVEN Nutrition	
52. GENERAL CONSIDERATIONS OF NUTRITION	927
53. THE MAJOR NUTRIENTS Protein, Lipid, and Carbohydrate	932
54. CHEMICAL ELEMENTS IN NUTRITION	941
55. WATER-SOLUBLE VITAMINS	946
56. LIPID-SOLUBLE VITAMINS	977
INDEX	995
