

CONTENT

1. The Development of Enzyme Kinetics	1
I. Introduction	1
II. Some Fundamental Concepts in Chemical Kinetics	2
III. The Development of a Rate Equation for Enzyme Reactions	9
IV. Variations and Extensions of the Basic Rate Equation	24
V. Summary and Conclusions	47
2. Enzyme Kinetics	
I. Introduction	50
II. Some Preliminaries	52
III. Kinetics of Systems in the Steady State	67
IV. The Enzyme-Substrate System in the Transient State	109
V. Molecular Inference and Mechanism from Kinetic Data: α -Chymotrypin and Some Related Enzymes	126
3. The Rate Equation for an Enzymic Reaction	
I. The Rate Equation	143
II. Factors Affecting the Rates of Enzymic Reactions	144
III. The Simplest Enzymic Mechanism	146
IV. Discussion	154
4. Some Aspects of the Thermodynamics and Mechanism of Enzymic Catalysis	
I. Introduction	157
II. Thermodynamics of Enzyme Reaction	159
III. Proteins as Catalysts	190
IV. Some Possibilities for Enzymic Mechanism	216
V. Conclusions	228
5. Structural and Stereospecificity	
I. General Problems of Enzyme Specificity	233
II. The Stereochemistry of Carbon Compounds	238
III. Hydrogen and Electron Transport	244
IV. Hydrolysis and Group Transfer Replacement Reactions	250
V. Specificity and Enzyme Mechanisms	254
6. Enzyme Models	
I. Introduction	260
II. Coenzymes	260
III. Enzymes	295
7. Mechanisms of Transfer Enzymes	

I. Introduction	305
II. Properties of the Transfer Enzymes	307
III. General Mechanisms for Transfer Enzymes	329
IV. Summary and Conclusion	344
8. Electron Transfer and Enzyme Catalysis	
I. From the Biochemical to The Physicochemical Problem	347
II. The Present Status of the Hypothesis of Compulsory Univalent Oxidation Steps	351
III. The Present Status of the Equi-valence Change Principle	353
IV. Electron Exchange Between Cations	355
V. The Reduction of Oxygen to Hydrogen Peroxide and to Water	374
9. Coordination, Chelation, and Catalysis	
I. Introduction	391
II. Properties of Complex Ions	392
III. Acid-Base Catalysis and Metal Ions	404
IV. Absorption Spectra and Oxidation-Reduction Potentials of Complexions	419
V. Oxidation-Reduction Catalysis	428
10. Protein Structure and Enzyme Activity	
I. Introduction	443
II. Protein Structure	444
III. The Molecular Dynamics of Proteins	456
IV. Proteins as Catalysts	467
V. Conclusion	510
11. Sulfhydryl and Disulfide Groups of Enzymes	
I. Introduction	512
II. The Chemistry and Reactions of –SH and –S-S-Groups	513
III. Characteristics of –SH and –S-S-Groups in Enzymes	545
IV. The Role of –SH Groups in Enzyme Action	557
12. Other Reactive Groups of Enzymes	
I. Nature of chemically Reactive Groups of Enzymes	589
II. Purposes and Interpretations of the Chemical Modification of Proteins	591
III. General Protein Reactions and Reagents	595
IV. Reactions Involving Only the Enzymic Site	608
V. Reactive Groups in Relation to Tertiary Protein Structure	614
VI. Concluding Remarks	616
13. Induced Formation of Enzymes	
I. General Introduction	620
II. Difficulties in Interpretation of Experimental Results	628
III. the Main Features of Enzyme Induction	632
IV. Enzymic Adaptation in Higher Organisms	6489
V. Possible Role of Nucleic Acids	651

VI. Specific Inhibition of Enzyme Formation	659
VII. Enzymic Reversion (Deadaptation)	660
VIII. The “Economy” of Enzyme Induction	663
IX. Facts, Theories, and Speculations	672
X. Summary and Conclusions	680
14. The Control of Enzyme Activity	
I. Nature of the Subject	681
II. Evidence for the Existence of Control in Vivo	682
III. Fundamental Concepts and Problems	684
IV. Amounts of Enzymes and Control of Activity	688
V. Kinetics of Single Enzymes and Sequences	695
VI. Macromolecule Syntheses and Their Interrelationships	712
VII. Time-Dependent Controls	713
VIII. Summary	715
Author Index	717
Subject Index	742
