

CONTENT

Chapter 1 Outline of lecture course	1
Chapter 2 Microbiological methods of vitamin analysis	
General technics	5
List of assay organisms	6
Stock solutions	11
Chapter 3 Principles of colorimetric and fluorometric methods of analysis	
Principles	15
Instrumentation	18
Colorimeter	18
Fluorometry	24
Chapter 4 Carotoene	28
Chapter 5 Vitamin A	
Biological methods	31
Calorimetric methods	32
Spectrometric method	35
Fluorometric methods	37
Chapter 6 Vitamin D	
Biological methods	38
Chemical method (Dewitt and Sullivan)	41
Chapter 7 Vitamin E- α,α -dipyridyl method	44
Chapter 8 Vitamin K-Prothrombin-time method	46
Chapter 9 Thiamin	
Biological methods	48
Microbiological methods	49
Thiochrome procedure	52
Determination of thiamin metabolites	56
Chapter 10 Riboflavin	
Biological methods	57
Microbiological method	58
Fluormetric methods	60
Determination of riboflavin in urine	62
Chapter 11 Nicotinic acid	
L. arabinosus method	64
Cyanogen bromide method	66
N ⁷ -methylnicotinamide in urine	69

N' –methyl –3 –carboxylamide-6-pyridone	70
Chapter 12 Pyridoxine	
Biological assay methods	71
Microbiological methods	72
Pyridoxmine and pyridoxal	75
4-pyridoxic acid in urine	76
Chapter 13 Pantothenic acid	
Biological methods	78
L. arabinosus method	78
Pantoic acid and pantoyl lactone	81
Chapter 14 Biotin	
L. arabinosus method	83
Sacch. Cerevisiae method	85
Neurospora method	86
Chapter 15 Pteroylglutamic acid (folic acid)	
Strep. Faecalis method	87
L. casei method	89
Chapter 16 Inositol	
Sacch. Carlsbergensis method	91
Neurospora method	92
Chapter 17 P-aminobenzoic acid	
Acetobacter suboxydans method	93
Neuroskate method	97
Chapter 18 Choline	
Neurospora method	95
Reineckate method	97
Chapter 19 Ascorbic acid	
2,6-dichlorophenolindophenol method	98
Photometric procedure	98
Titration procedure	100
Xylene-extraction procedure	101
2,4-dinitrophenylhydrazine method	103
Chapter 20 Microbiological determination of the amino acids	106
