

CONTENT

1 Observing Ovulation and Egg Transport	1
2 Collection and Preservation of Spermatozoa	15
3 Techniques and Criteria Used in the Study of Fertilization	37
4 Maximizing Yield and Developmental Uniformity of Eggs	64
5 Obtaining Eggs and Embryos from Sheep and pigs	76
6 The Culture of Mouse Embryos in Vitro	86
7 Egg Storage	117
8 Egg Transfer	133
9 The Transplantation of Mouse Eggs and Trophoblast to Extrauterine	146
10 Egg Micromanipulation	157
11 Development of Single Blastomeres	172
12 Allophenic Mice of Multi-Embryo Origin	186
13 Measuring Embryonic Enzyme Activity	215
14 Studying the Effect of viruses on Eggs	228
15 Methods for Histologic and Autoradiographic Analysis of the Early Mouse Embryo	238
16 Techniques for Studying Fine Structure of Cleavage, Blastocyst, and Early Implantation Stages	247
17 Preparation of Chromosomes and Interphase Nuclei of Early Embryos for Autoradiography	260
18 Studies of Metabolic Processes in the Preimplantation Conceptus	268
19 Preparation of Preimplantation Embryos for Autoradiography	278
20 Culture of the Rabbit Blastocyst Across the Implantation Period	284
21 Blastocyst transplantation in the Rabbit	290
22 Methods for the Culture of Post-Implantation Embryos of Rodents	305
23 Methods for Studying Ovoimplantation and Early Embryo-Placental Development	320
24 Methods for Studying Changes in Capillary Permeability of the Rat Endometrium	334
25 Observing Inside the Living Uterus	339
26 Study of the Exposed Guinea Pig Fetus	347
27 Fluorescent Antibody Methods	355
28 The Study of Endocytosis and Lysosome Function in Embryotrophic Nutrition	378
29 Methods for the Demonstration of Placental Circulation	419
30 Experimental Approaches to Placental Permeability	431
31 Mammary Gland Culture	442
32 Culture of Mammalian Embryonic Ovaries and Oviducts	472
33 Tissue Culture of Postnatal Male Mammalian Gonads	496
34 Preparation of Primary Cell Cultures from Preimplantation Embryos	511
Index	523
