Chapter 1	Stable Isotope Studies and Biological Element Cycling	1
	<i>By J. W. Smith</i>	
1	Introduction	1
2	Carbon	2
	Biological Cycling	8
3	Sulphur	9
	Biological Cycling	13
4	Nitrogen	14
	Biological Cycling	17
5	Hydrogen	17
6	Oxygen	19
7	General Conclusions	20
Chapter 2	Environmental Organic Chemistry of Rivers and Lakes, Both Water and Sediment	22
	<i>By P. A. Cranwell</i>	
1	Introduction	22
	Economic Significance	22
	Nature of the Freshwater Environment	23
2	Sources of Organic Matter	24
3	Organic Matter in Water	24
	Particulate Fraction	25
	Dissolved Organic Matter	25
	Simple Lipids	25
	Carbohydrates	25
	Organic Nitrogen Compounds	26
	Vitamins	27
	Compounds Responsible for Odours in Waters	28
	Coloured Organic Substances	29
	Release of Dissolved Organic Material	29

4	Organic Matter in Sediments	31
	Hydrocarbons	32
	Fatty Acids	34
	Alcohols and Sterols	37
	Ketones	40
	Carbohydrates	40
	Amino-acids	40
	Pigments	41
	Sedimentary Humus	43
5	Organophosphorus Compounds in Water and Sediments	44
6	Chemical Pollution of the Aquatic Environment	44
	Pesticides	46
	Stability and Fate of Pesticides	47
	Industrial and Domestic Pollutants and Sewage Effluents	49
	Organic Mercury Derivatives	50
7	Stability of Organic Matter in Aquatic Environments	52
	Steady-state Model of the Environment	53
8	Stable Carbon Isotope Distribution	54
Chapter 3	Environmental Organic Chemistry of Bogs, Marshes, and Swamps	55
	<i>By P. H. Given</i>	
1	Introduction: Characteristics of Wetland Environments	55
2	Some Ecological Aspects	57
3	Water in Peats	61
4	Organic-Inorganic Interactions in Peats	63
	Ion-Exchange Behaviour	63
	Trace Elements	65
	Sulphur	66
5	Organic Constituents of Wetland Peats	67
	Phenols and Humic Acids	67
	Alkanes, Fatty Acids, and Sterols	69
	Amino-Acids	71
	Carbohydrates	72
6	The Effect of Human Activities on Wetland Environments	72
7	The Preservation of Organic Matter in Wetlands	78

Chapter 4	Environmental Organic Chemistry of Oceans, Fjords, and Anoxic Basins	81
	<i>By R. J. Morris and F. Culkin</i>	
1	Introduction	81
2	Waters	82
	Organic Carbon	83
	Lipids	85
	Fatty Acids	85
	Hydrocarbons	87
	Sterols	88
	Amino-acids	90
	Carbohydrates	92
	Vitamins	92
3	Sediments	94
	Lipids	95
	Amino-acids	99
	Carbohydrates	100
	Pigments	101
	Humic Acids	101
	Vitamins	101
4	Anoxic Basins and Fjords	101
5	Water-Atmosphere Interface	103
6	Water-Sediment Interface	105
	Microbial Activity	105
	Sediment—Soluble Organic Compounds Associations	107
Chapter 5	Hydrocarbons in the Marine Environment	109
	<i>By J. W. Farrington and P. A. Meyers</i>	
1	Introduction	109
2	Origin of Hydrocarbons	110
	Biosynthesis	110
	Geochemical Processes	110
	Anthropogenic Inputs	111
3	Analysis of Petroleum Hydrocarbons and Biosynthesized Hydrocarbons	111
	Comparison of the Composition of Petroleum Hydrocarbons and Biosynthesized Hydrocarbons	111
	Petroleum Hydrocarbons	111

n-Alkanes	111
Branched alkanes	113
Cycloalkanes (naphthenes)	113
Aromatic hydrocarbons	113
Alkenes (olefins)	113
Recently Biosynthesized or Native Hydrocarbons	113
n-Alkanes	114
Branched alkanes	114
Alkenes (olefins)	114
Cycloalkanes and cycloalkenes	115
Aromatic hydrocarbons	115
Summary	115
Characteristics of Petroleum Hydrocarbons Useful for Detecting Petroleum Contamination	115
Sampling and Analysis	116
Sample Contamination	116
Intercalibration and Comparison of Data	117
Extraction	117
Saponification	118
Separation of Hydrocarbons from other Lipids	119
Analysis of Hydrocarbons	119
Infrared spectrometry	119
U.v. absorption and u.v. fluorescence spectrometry	119
Gas chromatography	120
Mass spectrometry and gas chromatography- mass spectrometry	120
Computer-interfaced mass spectrometry and gas chromatography-mass spectrometry	120
Quantification	122
Application of the methods of analysis	122
Reporting results of analyses	123
4 Distribution of Hydrocarbons	123
Marine Organisms	123
Sea-water	124
'Tarballs' and Tar Particles	126
Slicks	126
Surface Sediments	127
Marine Atmosphere	129
Concentrations of Hydrocarbons in Sea-water, Sediments, and Organisms	129
Sea-water	129
Organisms	130
Sediments	130
Oil-polluted samples	130

	Processes Controlling the Distribution of Hydrocarbons	130
	Physical-chemical	130
	Biological	131
5	Fate of Hydrocarbons in the Marine Environment	132
	Incorporation into Sediments	133
	Transfer to the Atmosphere	133
	Biochemical Alteration	133
6	Oil Spills	134
7	Summary	135
Chapter 6	The Fate of DDT and PCB's in the Marine Environment	137
	<i>By M. M. Rhead</i>	
1	Introduction	137
2	Laboratory Studies of Biological Degradation of DDT and PCB's	139
	Aquatic Plants	139
	Fish	140
	Micro-organisms	140
3	Transport of DDT and PCB's to the Marine Environment	148
	Transport	148
	Sewage Sludge	150
4	Distribution of DDT and PCB's in the Marine Environment	151
	Sea-water	151
	Sea Surface	152
	Organisms	152
5	Uptake of Pesticide Residues by Organisms	154
	Laboratory Studies	154
	Biological Magnification	155
	Field Studies	157
6	Analysis of Chlorinated Hydrocarbons	157

Chapter 7	Environmental Organic Chemistry of 2,4-Dichlorophenoxyacetic Acid	160
	<i>By J. E. Allebone, R. J. Hamilton, and B. Ravenscroft</i>	
1	Introduction	160
2	Synthesis	162
3	Distribution of 2,4-D in the Environment	162
	Plants	162
	Animals	165
4	Fate of 2,4-D in the Environment	166
	Plants	166
	Soil	174
	Water	179
5	Analysis	181
	Extraction	181
	Isolation	183
	Quantitative Estimation	187
6	Conclusion	189
	Author Index	191
