

CONTENTS

	Page
The Economics of Biological Production	
Chairman's Introduction	2
Industrial Aspects of Microbial Food Production with Special Reference to the Potential of the New Symba-yeast Process	3
Discussion	9
Factors Determining the Choice of Batch or Continuous Fermentation	11
Discussion	22
Pest Control in the Prevention of Unnecessary Losses	25
Discussion	28
The Impact of Manufacturing Industry on Agricultural Primary Production	31
Discussion	37
Industrial Benefits of Biological Studies	
Chairman's Introduction	42
The Effect of Biological Factors on the Design and Operation of Power Stations	43
Discussion	51
Biological Processes of Importance in the Treatment and Disposal of Industrial Waste Waters	53
Discussion	62
Dealing with Microbiological Trouble-makers	63
Discussion	70
Sponsored Research by Manufacturing Industries	73
Discussion	78
Biology and the Consumer	
Chairman's Introduction	82
Application of Sensory Methods to Flavour Problems in the Food Industry	83
Discussion	92
The Assessment of the Toxicity of a Potential Drug Problems and Difficulties	93
Discussion	101
Toxic Fungal Products	103
Discussion	116
General Discussion	119
The Role of Biologists in Industry	
Chairman's Introduction	124
Biologists in Industrial Research	125
Biologists in Non-technical management	135
Biologists as Industrial Engineers	145
General Discussion	153
Author Index	159
Subject Index	163
