

CONTENT

1 Monitoring the Proliferative Capacity of Cultured Animal Cells by Cell Cycle Analysis	1
2 Use of Flow Cytometry for Monitoring Antibody Productivity and Isolating High-Secreting Hybridoma Cells	17
3 Antibody Secretion Assays Using Gel Microdrops and Flow Cytometry	39
4 High-Resolution Cell Cycle Analysis of Cell Cycle-Regulated Gene Expression	63
5 Stability of Monoclonal Antibody Production in Hybridoma Cell Culture	85
6 Flow Cytometric Studies of Osmotically Stressed and Sodium Butyrate-Treated Hybridoma Cells	101
7 Flow Cytometric Analysis of Cells Obtained from Human Bone Marrow Cultures	121
8 Measurement of Intracellular pH During the Cultivation of Hybridoma Cells in Batch and Continuous	147
9 The relationship Between Intracellular pH and Cell Cycle in Cultured Animal Cells Using SNARF-1 Indicator	163
10 Assessment of Cell Viability in Mammalian Cell Lines	177
11 Analysis of Apoptosis by Flow Cytometry	193.
12 Monitoring Baculovirus Infection and Protein Expression in Insect Cells	211
13 Use of Protein Distribution to Analyze Budding Yeast Population Structure and Cell Cycle Progression	225
14 Cell Cycle Analysis of Microorganisms	241
15 Bacterial Characterization by Flow Cytometry	257
16 Assessment of Viability of Bacteria by Flow Cytometry	291
17 Advances in the Flow Cytometric Characterization of Plant Cells and Tissues	311
Index	327
