

CONTENTS

	Page
1. Image Fidelity : Characterizing the Imaging Transfer Function	
I Introduction	2
II The Concept of a Linear, Shift-invariant (LSI) System	6
III Characterizing LSI Systems with Sinusoids	9
IV Characterizing the Fluorescence Imaging System	14
V The Contrast Modulation Transfer Function (CMTF)	23
VI Relating the CMTF and the OTF	26
VII Implications	30
VIII The Analysis of the Z-Axis	38
IX Summary	41
References	44
2. Validation of an Imaging System	
I Shading Correction	48
II Linearity	62
III Geometric Correction and Registration	63
IV Modulation Transfer	79
V Sampling Frequency	81
VI Summary	82
References	82
3. Imaging of unresolved Objects, Superresolution, and Precision of Distance Measurement, with Video Microscopy	
I Visualizing Objects Narrower than the Resolution Limit of the Light Microscope	85
II Diffraction Patterns of Very Narrow Objects	89
III Superresolution	96
IV Positional Information and Lateral Setting Accuracy	101
V Ultrathin Optical Sectioning and Axial Setting Accuracy	104
VI Other Factors Affecting the Choice of Pixel Dimensions, Calibration, and Choice of Magnification	107
References	111
4. Fluorescent Standards	
I Introduction	113
II System Standards	114
III Analytical Calibration Standards	122
IV Concluding Statement	125
References	125
5. Fluorescent Indicators of Ion Concentrations	
I Introduction	127
II Proton Indicators	129
III Sodium Indicators	140
IV Chloride Indicators	141
V Calcium Indicators	142
VI Prospects and Conclusions	152
References	153
6. Fluorescence Ratio Imaging Microscopy	
I Introduction	157
II Basic Principles of Fluorescence Ratio Imaging	158

III	Requirements for a Fluorescence Ratio Imaging Microscope System	160
IV	Validation of the Fluorescence Ratio Imaging Microscope System	174
V	Measurements Using Fluorescence Ratio Imaging	183
VI	Conclusion and Prospectus	189
	References	190
7.	Fluorescent Indicators of Membrane Potential : Microspectrofluorometry and Imaging	
I	Introduction	193
II	Microspectrofluorometry with Nernstian Dyes	202
III	Imaging with Charge-Shift Dyes	205
IV	Discussion	215
	References	217
8.	Resonance Energy Transfer Microscopy	
I	Introduction	220
II	Fluorescence Theory	220
III	Techniques of Measurement in the Microscope	227
IV	Experimental Parameters Measured in the Microscope	233
V	Biological Applications	235
VI	Problems	239
VII	Conclusions	243
	References	243
9.	Total Internal Reflection Fluorescence Microscopy	
I	Introduction	246
II	Theory	247
III	Optical Configuration for a Microscope	252
IV	Applications of TIRF	264
V	Conclusions	269
	References	269
10.	Designing, Building, and Using a Fluorescence Recovery after Photobleaching Instrument	
I	Introduction	271
II	Designing and Building a Spot FPR Instrument	273
III	Artifacts of FPR	298
IV	Beyond Spot FPR – Obtaining Spatial Information	300
V	Conclusion	304
	Reference	305
11.	Interpretation of Fluorescence Correlation Spectroscopy and Photobleaching Recovery in Terms of Molecular Interactions	
I	Introduction	307
II	Characteristic Responses	309
III	Technical Issues	314
IV	Measurement of Aggregation of Fluorophores by FCS	326
V	Interaction Systems	327
VI	Summary	329
	References	331
12.	Fluorescence Polarization Microscopy	
I	Introduction	333
II	Theory	334
III	Experiment	349
	References	352
13.	Fluorescence Microscopy in Three Dimensions	
I	Introduction	353
II	Image Formation in Three Dimensions	355
III	Removal of Out-of-Focus Information	359
IV	Synthetic Projection and Stereographic Imaging	365
V	Experimental Considerations	367
VI	Display	368

VII	Experimental Results for imaging Chromosomes	370
VIII	Summary	372
	References	376
14.	Three-Dimensional Confocal Fluorescence Microscopy	
I	Introduction	379
II	Confocal Microscopy	380
III	Confocal Imaging Results	387
IV	Discussion	395
	References	398
15.	Emission of Fluorescence at an Interface	
I	Introduction	399
II	Theory	400
III	Graphical Results	405
IV	Consequences for Experiments	411
V	Conclusions	415
	References	416
16.	Fluorescence Labeling and Microscopy of DNA	
I	Introduction	417
II	Labeling Strategies	418
III	Measurements	422
IV	Measurement Techniques	436
V	New Directions in FDIM	442
	References	445
17.	Multiple Spectral Parameter Imaging	
I	Introduction	449
II	Practical Aspects of Multiple Spectral Parameter Imaging	450
	References	476
	Index	479
	Contents of Recent Volumes	499
