

CONTENT

1 An Introduction	1
PART MENDELIAN GENETICS	17
2 Fundamentals of Mendelian Genetics	18
3 Extensions and Applications of Mendelian Genetics	42
4 Chromosomes and Heredity	73
5 Genetic Linkage	104
PART MOLECULAR GENETICS	129
6 Chemistry of the Gene	130
7 Replication and Recombination of Genes	154
8 Transcription and Its Control in Prokaryotes	185
9 Eukaryotic Gene Structure and Expression	219
10 Translation	255
11 Gene Mutation	295
12 Transposable Elements	322
13 Genetics of Bacteria and Phages	340
14 Developmental Genetics	369
15 Gene Cloning and Manipulation	415
16 Applications of Gene Cloning and Advanced Genetic Mapping	448
17 Genes and Cancer	482
18 Extranuclear Inheritance	504
PART 3 POPULATION GENETICS	531
19 An Introduction to Population Genetics	532
20 Extensions and Applications of Population Genetics	557
