

CONTENTS

Methods for Identifying Acetic Acid Bacteria	1
Identification of human Vibrios and Allied Organisms	9
Classification of Azotobacters	19
Properties of Acinetobacter and Related Genera	29
The Identification and Classification of Rhizobium	51
The Identification of Yellow-Pigmented Rods	67
Identification of Aeromonas, Vibrio and Related Organisms	79
The use of Cell Wall Analysis and Gel Electrophoresis for the Identification of Coryneform Bacteria	85
The genus Bacillus: Aids to the Identification of its Species	93
Identification of Genera of the Actinomycetales	111
Methods for the Identification of Mycoplasmas	125
The Culture of Blue-Green Algae and the Use of the Electron Microscope in Identification and Classification	137
Two Simplified Schemes for Identifying Yeast Cultures	151
The Determination of Deoxyribonucleic Acid Base Compositions and its Application to Bacterial Taxonomy	177
Immunofluorescence-A Useful Technique for Microbial Identification	187
Author Index	197
Subject Index	204
