

## CONTENTS

Part I: Historical Background	
1 History of Microorganisms in Food	3
Part II: Taxonomy, Sources, Types, Incidence, and Behavior of Microorganisms in Food	
2 Taxonomy, Role, and Significance of Microorganisms in Foods	13
3 Intrinsic and Extrinsic Parameters of Foods That Affect Microbial Growth	38
4 Incidence and Types of Microorganisms in Foods	63
Part III: Determining Microorganisms and/or Their Products in Foods	
5 Culture, Microscopic, and Sampling Methods	97
6 Physical, Chemical, and Immunologic Methods	122
7 Bioassay and Related Methods	166
Part IV: Microbial Spoilage of Foods	
8 Spoilage of Fruits and Vegetables	187
9 Spoilage of Fresh and Processed Meats, Poultry, and Seafood	199
10 Spoilage of Miscellaneous Foods	234
Part V: Food Preservation and Some Properties of Psychrotrophs, Thermophiles, Radiation Resistant, and Lactic Acid Bacteria	
11 Food Preservation with Chemicals	251
12 Radiation Preservation of Foods and Nature of Microbial Radiation Resistance	290
13 Low-Temperature Food Preservation and Characteristics of Psychotropic Microorganisms	314
14 High-Temperature Food Preservation and Characteristics of Thermophilic Microorganisms	335
15 Preservation of Foods by Drying	356
16 Fermented Foods and Related Products of Fermentation	371
Part VI: Microbial Indicators of Food Safety and Quality, Principles of Quality Control, and Microbiological Criteria	
17 Indicators of Food Microbial Quality and Safety	413
18 Microbiological Safety of Foods	434
Part VII: Foodborne Diseases	
19 Staphylococcal Gastroenteritis	455
20 Food Poisoning Caused by Gram-Positive Sporeforming Bacteria	479
21 Foodborne Listeriosis	510
22 Foodborne Gastroenteritis Caused by Salmonella, Shigella, and Escherichia	553
23 Foodborne Gastroenteritis Caused by Vibrio, Yersinia, and Campylobacter Species	583
24 Foodborne Animal Parasites	611
25 Other Proved and Suspected Foodborne Agents: Mycotoxins, Viruses, Aeromonas, Plesiomonas, Scombroid, and Paralytic Shellfish Poisonings	641
Appendix,	671
