<i>Preface to the Third Edition</i>	<i>xi</i>
<i>Preface to the Second Edition</i>	<i>xiii</i>
<i>Preface to the First Edition</i>	<i>xv</i>
<i>Acknowledgments</i>	<i>xvii</i>

1. Forest Ecosystem Analysis at Multiple Time and Space Scales

I. Introduction	1
II. The Scientific Domain of Forest Ecosystem Analysis	2
III. The Space/Time Domain of Ecosystem Analysis	4
IV. Time and Space Scaling from the Stand/Seasonal Level	10
V. Management Applications of Ecosystem Analysis	14
VI. Related Textbooks	16
VII. Web Site for Updated Materials	16

SECTION I. Introduction to Analysis of Seasonal Cycles of Water, Carbon, and Minerals through Forest Stands

2. Water Cycles

I. Introduction	19
II. Heat and Water Vapor Transfer from Vegetation	21
III. Water Flow through Trees	34
IV. Water Storage and Losses from Snow	46
V. Water Flow across and through Soil	50
VI. Coupled Water Balance Models	52
VII. Summary	57

3. Carbon Cycle

I. Introduction	59
II. Photosynthesis	62
III. Autotrophic Respiration	67
IV. Heterotrophic Respiration	71

V. Modeling Photosynthesis and Respiration	76
VI. Net Primary Production and Allocation	82
VII. Comparison of Forest Ecosystem Models	96
VIII. Summary	98

4. Mineral Cycles

I. Introduction	99
II. Plant Processes Affecting Nutrient Cycling	100
III. Sources of Nutrients	111
IV. Soil and Litter Processes	119
V. Mass Balance and Models of Mineral Cycles	138
VI. Summary	144

SECTION II. Introduction to Temporal Scaling

5. Temporal Changes in Forest Structure and Function

I. Introduction	149
II. Structural Stages in Stand Development	151
III. Functional Responses of Stands at Different Stages in Development	159
IV. Looking Back in Time	162
V. Ecosystem Models, Projections Forward in Time	168
VI. Summary	180

6. Susceptibility and Response of Forests to Disturbance

I. Introduction	183
II. Biotic Factors	184
III. Abiotic Factors	203
IV. Summary	218

SECTION III. Introduction to Spatial Scaling and Spatial/Temporal Modeling

7. Spatial Scaling Methods for Landscape and Regional Ecosystem Analysis

I. Introduction	225
II. Abiotic Site Variables	231
III. Providing the Driving Variables, Climatology	236
IV. Describing the Ecosystem	243
V. Spatially Explicit Landscape Pattern Analysis	257
VI. Data Layer Inconsistencies	259
VII. Summary	259

8. Regional and Landscape Ecological Analysis	
I. Introduction	261
II. Horizontal Connections: Biotic Analysis of Forest Patterns	262
III. Vertical Connections: Forest–Atmosphere Interactions	272
IV. Vertical and Horizontal Connections: Regional Biogeochemistry	274
V. Summary	288
9. The Role of Forests in Global Ecology	
I. Introduction	291
II. Global Forest Distribution	292
III. Forest–Climate Interactions	300
IV. Forests in the Global Carbon Cycle	303
V. Forests and Biodiversity	310
VI. Sustainability of Global Forests	314
VII. Summary	315
10. Advances in Eddy-Flux Analyses, Remote Sensing, and Evidence of Climate Change	
I. Introduction	317
II. Eddy-Covariance Fluxes	318
III. New Remote Sensing of Forests	328
IV. Climate Change and Forests	339
<i>Epilogue</i>	345
<i>Bibliography</i>	347
<i>Index</i>	409

Color plates appear between pages 220–221; 260–261; 268–269; and at the back of the book.
