

## CONTENTS

List of Contributors	ix
Foreword	xi
Preface	xiii
1 The Operation of the Electron Microscope	1
2 Ancillary Apparatus and Special Attachments for the Electron Microscope	43
3 The Preparation of Specimen Support Films	58
4 Techniques for Mounting, Dispersing and Disintegrating Specimens	75
5 Replica and Shadowing Techniques	96
6 Techniques for the Optical Selection of Specimens	153
7 The Fixation and Embedding of Biological Specimens	166
8 The Preparation of Thin Sections	213
9 Section Staining, Cytology, Autoradiography and Immunochemistry for Biological Specimens	254
10 The Examination of Small Particles	311
11 Negative Staining Methods	328
12 The Preparation of Transmission Specimens of Metals and other Crystals	356
13 Vacuum Evaporated Metal Films	411
14 Interpretation of Micrographs of Metal Foils and Other Objects	433
15 Electron Diffraction	478
16 Reflection Electron Microscopy	525
Appendix	546
Index	551
