

CONTENTS

Communications

Freezing and drying of enzyme protein	9
Differential scanning calorimetry of frozen microbial cells	19
Studies on the character of phospholipase C and its effect on survival of the cell after freeze-	
Thawing or freeze-drying of yeast	29
Recovery of Escherichia Coli after injury from freezing	37
Effect of peptone added to the recovery medium on the viability of freeze-dried bacteria	47
Oxygen induced free radicals and viable decay in freeze-dried bacteria	55
DNA damage in Salmonella typhimurium LT-2 by a combination of freezing and nutrition	61
Induction of genetic change by drying in yeast	71
Tolerance of Artemia dry eggs for temperature vacuum and radiation	79
Sensitivity of L-Phase variant cells to freezing and drying	89
Protection mechanisms of biological materials during freezing and thawing	97
The preservation of ciliated protozoa in liquid nitrogen	103
The effects of freezing and freeze drying on Adenosine Triphosphatase and Acetylcholinesterase	
Of the human red blood cell	109
