Section I Capture and Utilization of Solar Energy

- ✓ **Photohydrogen** Production in Green Algae: Water Serves as the Primary Substrate for Hydrogen and Oxygen Production
N. I. Bishop, M. Frick, and L. W. Jones
- Hydrogen Production by Marine Photosynthetic Organisms as a Potential Energy Resource 23
A. Mitsui and S. Kumazawa
- Catalytic and Structural Properties of the Enzyme Hydrogenase and Its Role in Biophotolysis of Water 53
A. I. Krasna
- Use of an Enzymic Electric Cell and Immobilized Hydrogenase in the Study of the Biophotolysis of Water to Produce Hydrogen 61
T. Yagi
- The Mechanism of Hydrogen Photoevolution in Photosynthetic Organisms 69
D. King, D. L. Erbes, A. Ben-Amotz, and M. Gibbs
- Mutational Analysis of *Chlamydomonas reinhardtii*: Application to Biological Solar Energy Conversion 77
A. C. McBride, S. Lien, R. K. Togasaki, and A. San Pietro
- Hydrogen Photoproduction from Water 87
S. Kurita, K. Toyoda, T. Endo, N. Mochizuki, M. Honya, and T. Onami
- The Molecular Mechanisms of Photosynthetic Hydrogen and Oxygen Production 101
E. Greenbaum
- Development of Oxygen-Evolving System as Described in Terms of Thermoluminescence 109
Y. Inoue and K. Shibata
- Inhibition of Electron Transport on the Oxygen-Evolving Side of Photosystem II by an Antiserum to a Polypeptide Isolated from the Thylakoid Membrane 129
G. H. Schmid, W. Menke, F. Koenig, and A. Radunz
- Biological Conversion** of Light Energy into Electrochemical Potential 143
M. Nishimura, Y. Yamamoto, U. Takahama, M. Shimizu, and K. Matsuura

Section II Synthesis of Organic Compounds from Carbon Dioxide

Synthesis of Organic Compounds from Carbon Dioxide in Land Plants <i>J. A. Bassham</i>	151
Wavelength-Effects of Incident Light on Carbon Metabolism in <i>Chlorella</i> Cells <i>S. Miyachi, A. Kamiya, and S. Miyachi</i>	167
Two Phases of CO ₂ Absorption on Leaves <i>T. Ogawa and K. Shibata</i>	183
Starch Degradation in Isolated Spinach Chloroplasts <i>D. G. Peavey, M. Steup, and M. Gibbs</i>	197
Conversion of Glucose-Polymer to Sucrose in <i>Chlorella</i> Induced by High Temperature <i>Y. Nakamura and S. Miyachi</i>	203
Photosynthesis and Respiration in Relation to Productivity of Crops <i>A. Tanaka</i>	213
Increasing Photosynthetic Carbon Dioxide Fixation by the Biochemical and Genetic Regulation of Photorespiration <i>I. Zelitch, D. J. Oliver, and M. B. Berlyn</i>	231
Regulation of Products of Photosynthesis by Photorespiration and Reduction of Carbon <i>N. E. Tolbert</i>	243
Effects of Light Intensity on the Rates of Photosynthesis and Photorespiration in C ₃ and C ₄ Plants <i>R. Ishii, T. Takehara, Y. Murata, and S. Miyachi</i>	265

Section III Nitrogen Fixation and Production of Single Cell Protein

Energetics of Biological N ₂ Fixation <i>R. H. Burris</i>	273
N ₂ Fixing Hydrogen Bacteria <i>J. Ooyama</i>	291
Possible Routes to Increase the Conversion of Solar Energy to Food and Feed by Grain Legumes and Cereal Grains (Crop Production): CO ₂ and N ₂ Fixation, Foliar Fertilization, and Assimilate Partitioning <i>R. W. F. Hardy and U. D. Havelka</i>	299
Distribution of Nitrogen-Fixing Blue-Green Algae in the Forests <i>A. Watanabe</i>	323
Genetic Derepression of Nitrogenase-Mediated H ₂ Evolution by <i>Klebsiella pneumoniae</i> <i>K. Andersen, K. T. Shanmugam, and R. C. Valentine</i>	339

Section IV Practical Applications

Possibilities of Biomass from the Ocean: The Marine Farm Project <i>W. J. North</i>	347
Mass Culture of <i>Chlorella</i> in Asian Countries <i>O. Tsukada, T. Kawahara, and S. Miyachi</i>	363
Mass Production of Algae: Bioengineering Aspects <i>J. C. Goldman and J. H. Ryther</i>	367
A Critical Analysis of Bioconversion with Microalgae <i>W. J. Oswald and J. R. Benemann</i>	379

Using Sugar Crops to Capture Solar Energy	397
<i>E. S. Lipinsky and T. A. McClure</i>	
Fuel Gas Production from Selected Biomass via Anaerobic Fermentation	411
<i>D. L. Wise, R. L. Wentworth, and R. G. Kispert</i>	
Application of Solar Energy Bioconversion in Developing Countries	427
<i>U. Horstmann</i>	
Biological Constraints on Seaweed Culture	437
<i>G. A. Jackson</i>	
Bioengineering Approaches and Constraints	449
<i>J. Myers</i>
