

CONTENTS

Chapter 1 General Aspects of Chemistry and Metabolism of Flavonoids	1
Chapter 2 Origin of Phenylpropanoid (C6-C3) and Acetate Units	15
Chapter 3 Chalcone Synthase and Chalcone Isomerase: “Flavanone Synthase”	23
Chapter 4 Biosynthesis of Flavanones and 3-Hydroxyflavanones (Dihydroflavonols): The “Grid” Pattern of Basic Hydroxylations of the B- and C-Rings	39
Chapter 5 Flavone and Flavonol Pathways	47
Chapter 6 Pathway to Proanthocyanidins (Condensed Tannins), Flavan-3-ols, and Unsubstituted Flavans	63
Chapter 7 Anthocyanidin-Anthocyanin Pathway	101
Chapter 8 Isoflavonoid Pathways	133
Chapter 9 Chalcones, Dihydrochalcones, and Aurones	159
Chapter 10 Biflavonoids	165
Chapter 11 Secondary Changes: Recycling and Degradation of Flavonoids	171
Chapter 12 Competitive Pathways in Secondary Metabolism	179
Chapter 13 Regulation	189
Chapter 14 Impact of Methodology on Flavonoid Metabolism	225
Chapter 15 Metabolic and Evolutionary Aspects of the Basic Function of Flavonoids	239
Chapter 16 General History of Studies of Flavonoid Metabolism	261
Index	269
