

## CONTENTS

Preface	vii
---------	-----

### INTRODUCTION

1. Plant Lipids and Their Interactions	2
--	---

### PLANT LIPID METABOLISM AND PLANT-PLANT INTERACTIONS

2. Biosynthesis of Chloroplast Glycerolipids	10
3. Gibberellins in Higher Plants : The Biosynthetic Pathway Leading to GA	25
4. Fatty Acids in Plants : A Model System	44
5. Chemical and biological Aspects of Brassinolide	53
6. Biochemistry of Conifer Resistance to Bark Beetles and Their Fungal Symbionts	76
7. Sesquiterpenes as Phytoalexins and Allelopathic Agents	93
8. Plant Growth Regulation by Mevinolin and Other Sterol Biosynthesis Inhibitors	109
9. Synthesis and Fungistatic Activity of Podocarpic Acid Derivatives	140

### PLANT-INSECT AND PLANT NEMATODE INTERACTIONS

10. The Role of Cutin, the Plant Cuticular Hydroxy Fatty Acid Polymer, in the Fungal Interaction with Plants	152
11. Variability in Steroid Metabolism Among Phytophagous Insects	176
12. Free and Conjugated Ecdysteroids in the Tobacco Hornworm, <i>Manduca Sexta</i> , and Various Developmental Stages	187
13. Metabolism and Function of Sterols in Nematodes	200

### PLANT-MICROBIAL INTERACTIONS

14. Fatty acids and Esters as Antimicrobial/Insecticidal Agents	220
15. Hopanoids : Sterol Equivalents in Bacteria	239

16. Structure-Function Relationships for Sterols in <i>Saccharomyces</i> <i>Cerevisiae</i>	252
17. Mechanism of Fungal Growth Suppression by Inhibitors of Ergosterol Biosynthesis	268
18. Antifungal Activity of Plant Steroids	286
19. Biosynthesis and Requirement for Sterols in the Growth and Reproduction of Oomycetes	304
20. Fatty Acids for Fungal Development : Structure-Activity Relationships	329
21. The Involvement of Membrane-Degrading Enzymes During Infection of Potato Leaves by <i>Phytophthora infestans</i>	343
22. Use of Cerulenin and Butyrate in the Study of <i>Candida albicans</i> Germination	355
Author Index	366
