

## CONTENTS

## PART 1

CHEMISTRY OF CHELATION AND SOME EFFECTS  
OF CHELATION IN BIOLOGICAL SYSTEMS

Metal Chelation and mechanisms of Metal Function in Biological Systems	3
Chelate-Metal-Chelate Binding of Importance in Soil-Plant Relationships	14
Possible Interpretation of a Paper on Leaching Studies in a Sandy Soil with manganese, Zinc and Copper Sulfates	20
Effect of Chelating Agents and Iron Chelates on Absorption of Manganese	21
Chelation in Heavy-Metal Induced Iron Chlorosis	25
A Hypothesis of the Cause of Lime-Induced Chlorosis	28
Effect of Bicarbonate on pH in Plant Roots	35
Plants that do Poorly in Acid Soils	36
Use of Synthetic Chelating Agents of Different Metal Binding Capacities in Determining the Relative Ability of Two Varieties of Soybeans to Bind and Absorb Iron	38
Some metabolic Inhibitor Studies on Uptake of FeEDDHA	41
Effect of Chelating Agents on Cation Accumulation	43
Preliminary Studies on the Effect of Concentration of FeEDDHA on Iron Uptake by Potato Discs	50
Uptake by Plants of Fe <sup>59</sup> VS. C <sup>14</sup> -Chelating Agents at Different Temperatures	53
Do Chelating Agents Penetrate Plant Cells?	57
FeEDDHA in the Xylem Elements of Bean Shoots	62
Are Chelating Agents Metabolized in Soils and Plants?	64
Preliminary Studies on the Effect of Synthetic Chelating Agents on Metal Binding in Protein As Indicated by Sephadex Separations	69
Binding of Synthetic Chelating Agents to Determine the Ability of Constituents through Chelate-Metal-Cell Bonding	71
Effect of Chelating Agents on In Vitro CO <sub>2</sub> -Fixing Enzyme Systems	75
Inhibition of the Phosphoenolpyruvate Carboxylase and the Ribose-5-Phosphate Carboxylation Reactions by Metals of Varying Co-Ordination Stability	82
Use of Synthetic Chelating Agents to Determine the Ability of Constituents in Two Enzyme Systems to Bind Magnesium and in One to Bind Manganese	84
Effect of Calcium Level on Uptake of Fe <sup>59</sup> from FeEDDHA by Bush Beans	87
Effect of Equimolar Amounts of EDTA on Uptake of Some Metal Ions in the Presence of Calcium	87
Metal Chelates as Models for Metal Participation in Enzyme-Catalyzed Reactions	89

Metal Chelates as Models for Metal Participation in Enzyme-Catalyzed Reactions	89
Metal Chelates of Malonate and Oxaloacetate as Inhibitors of Phosphoenolpyruvate Carboxylase	91
The Absorption of Fe <sup>59</sup> by Potato Discs-A Preliminary Discussion	92
Influence of EDTA and Calcium on Rubidium Accumulation	98
Inhibition of Uptake of Fe <sup>59</sup> from Fe <sup>59</sup> EDDHA by Excess Chelating Agent	99
Effect of pH on Uptake of Some Metals from DTPA Chelates	100

## PART II

### PRACTICAL APPLICATIONS

#### OF SYNTHETIC CHELATING AGENTS IN PLANT NUTRITION

Metal Chelates in Plant Nutrition-A Revision on Major Questions and Answers on Their Use	105
Some Characteristics of Chelating Agents Used in Plant Nutrition	112
Growth Effects of Chelating Agents	117
Methods of Application of Chelating Agents to the Soil	119
Ornamental Plants Need Not Die of Iron Chlorosis	121
Use of FeEDDHA in Nutrient Solution Cultures (Hydroponics) for Growing Plants	124
Screening of New Chelating Agents for Soil Application to Correct Iron Chlorosis	127
Screening of New Chelating Agents for Soil Application to Correct Iron Chlorosis	127
Soybean Pot Tests as an Index of soil Application Rates of Iron Chelates to Correct Lime-Induced Chlorosis in Avocado Trees	128
Use of EDDHA as a Means of Testing Soils for Available Iron	131
Problems with Iron Foliage Sprays	134
Technique of Injecting Substances into Woody Plants	138
Metal Chelates and Virus Diseases	142
Recommendations for Use of Chelating Agents for Growing Crops	145
General Conclusions Concerning Chelating Agents in Plant Nutrition in 1962	149
A Decade of Literature References on Chelating Agents in Plant Nutrition and Closely Related Fields	151
