

Contents

Preface	vii
PART I Basic Techniques and Principles	1
1 Overview of Facilities and Techniques	3
2 Tissue Culture Media—Composition and Preparation	26
3 Stages of Micropropagation	52
4 Application of Tissue Culture Techniques to Horticultural Crops	66
PART II Callus (Tissue) and Organ Culture	71
5 Overview of Callus (Tissue) and Organ Culture	73
6 In Vitro Propagation of African Violets	80
7 In Vitro Propagation of Lilies	85
8 In Vitro Propagation of Snake Plant (<i>Sansevieria</i>)	92
9 Tissue Culture of Strawberry (<i>Fragaria</i>)	96
10 Micropropagation of Camellia	102
11 Propagation of Fern (<i>Nephrolepis</i>] Through Tissue Culture	106
12 Establishment and Maintenance of Carrot Callus	111
13 Callus Induction in Grasses	116
14 Initiation of Adventitious Shoots of <i>Begonia</i> × <i>hiemalis</i>	122
15 Sweet Potato Tissue Culture	126
16 Establishment of Root Cultures In Vitro	132
17 Effects of Carbohydrates, Vitamins, and Gelling Agents on Callus Growth and Plantlet Regeneration	136
PART III Cell Culture	149
18 Overview of Cell Suspension Culture	151
19 Establishment of Carrot Cell Suspension Cultures	161
20 Plating of Cell Suspension Cultures	164
21 Embryogenesis in Carrot Cell Suspension Cultures	169
22 Isolation and Culture of Single Cells	174
23 Potato Micropropagation and Germplasm Storage	181
PART IV Protoplast Culture	187
24 Overview of Protoplast Isolation and Culture	189
25 Isolation and Culture of Protoplasts from Carrot Cell Suspension Cultures	200

vi CONTENTS

26	Isolation and Culture of Protoplasts from Grass Callus Cultures	205
PART V	Preparation of Specimens for Microscopy	211
27	Specimen Preparation for Light Microscopy	213
28	Specimen Preparation for Scanning Electron Microscopy	225
	Appendices 1–19	234
	Glossary	269
	Index	279
