<b>1 Biomimetic Polysaccharides and Derivatives for Cartilage Tissue Regeneration</b>	1
<i>Ferdous Khan and Sheikh Rafi Ahmad</i>	
1.1 Introduction	2
1.2 Strategies for Cartilage Tissue Engineering	3
1.3 Designing Scaffold for Cartilage Tissue Engineering	4
1.4 Natural Polysaccharides for Cartilage Tissue Engineering	
1.4.1 Chitin and Chitosan (CS)-based Materials	8
1.4.2 HA-based Materials	11
1.4.3 Alginate-based Materials	12
1.4.4 Starch-based Materials	14
1.4.5 Cellulose-based Materials	15
1.5 Conclusions and Remarks on Prospects	17
References	18
<b>2 Biomimetic Synthesis of Self-Assembled Mineralized Collagen-Based Composites for Bone Tissue Engineering</b>	23
<i>Xiumei Wang, Zhixu Liu and Fuzhai Cui</i>	
2.1 Introduction	24
2.2 Hierarchical Assembly of Mineralized Collagen Fibrils in Natural Bone	25
2.2.1 Panorama of Natural Bone	25
2.2.1.1 Chemical Composition of Bone	25

2.2.1.2	Hierarchical Organization of Natural Human Bone	26
2.2.2	Self-Assembly of Mineralized Collagen Fibrils in Nature	27
2.2.2.1	Collagen and Collagen Fibrils Array	27
2.2.2.2	Structural Organization of Mineralized Collagen Fibrils	28
2.2.2.3	Examples of Mineralized Collagen Fibrils in Natural Tissues	30
2.3	Biomimetic Synthesis of Self-Assembled Mineralized Fibrils	34
2.3.1	<i>In Vitro</i> Self-Assembly of Mineralized Collagen Fibrils	34
2.3.2	<i>In Vitro</i> Self-Assembly of Mineralized Recombinant Collagen Fibrils	37
2.3.3	<i>In Vitro</i> Self-Assembly of Mineralized Silk Fibroin Fibrils	38
2.3.4	<i>In Vitro</i> Self-Assembly of Mineralized Peptide-Amphiphilic Nanofibers	39
2.4	Applications of Mineralized Collagen-based Composites for Bone Regeneration	40
2.4.1	Fabrication of Nano-HA/Collagen-based Composites	40
2.4.1.1	Three-Dimensional Biomimetic Bone Scaffolds: Nano-HA/Collagen/PLA Composite (nHAC/PLA)	40
2.4.1.2	Injectable Bone Cement: Nano-HA/Collagen/Calcium Sulfate Hemihydrate (nHAC/CSH)	41
2.4.2	Functional Improvements of Mineralized Collagen-based Composites	42
2.4.3	Examples of Animal Models and Clinical Applications	43
2.5	Concluding Remarks	44
	References	45

<b>3 Biomimetic Mineralization of Hydrogel Biomaterials for Bone Tissue Engineering</b>	<b>51</b>
<i>Timothy E.L. Douglas, Elzbieta Pamula and Sander C.G. Leeuwenburgh</i>	
3.1 Introduction	51
3.2 Incorporation of Inorganic Calcium Phosphate Nanoparticles into Hydrogels	52
3.2.1 Inorganic Nanoparticles	53
3.2.2 Hydrogel Composites Based on Natural Polymer Matrices	53
3.2.3 Hydrogel Composites Based on Synthetic Polymer Matrices	55
3.3 Biomimetic Mineralization in Calcium and/or Phosphate-Containing Solutions	56
3.3.1 Soaking in Solutions Containing Calcium and Phosphate Ions	56
3.3.2 <i>In Situ</i> Synthesis of Hydroxyapatite	57
3.4 Enzymatically-Induced Mineralization Using Alkaline Phosphatase (ALP)	58
3.4.1 ALP-Induced Hydrogel Mineralization for Fundamental Research	58
3.4.2 Enzymatic Mineralization for Bone Regeneration Applications	59
3.4.3 ALP Entrapment	60
3.5 Enhancement of Hydrogel Mineralization Using Biomacromolecules	60
3.5.1 Systems to Test Mineralization-Inducing Potential of Biomacromolecules	60
3.5.2 Biomacromolecule-Enhanced Mineralization for Bone Regeneration Applications	61
3.6 Conclusions	62
References	63
<b>4 Biomimetic Nanofibrous Scaffolds for Bone Tissue Engineering Applications</b>	<b>69</b>
<i>Robert J. Kane and Peter X. Ma</i>	
4.1 Bone Tissue Engineering and Scaffold Design	69
4.1.1 Biomimetic Bone Tissue Engineering Scaffolds	71

## viii CONTENTS

4.2	Self-Assembled Nanofiber Scaffolds	73
4.2.1	Fabrication and Physical Properties	73
4.2.2	Biological Properties of PA Scaffolds	74
4.2.3	Conclusions	75
4.3	Electrospun Scaffolds	75
4.3.1	Fabrication and Physical Properties	75
4.3.2	Biological Behavior of Electrospun Scaffolds	78
4.3.3	Conclusions	79
4.4	Thermally Induced Phase Separation (TIPS) Scaffolds	80
4.4.1	Fabrication and Physical Properties	80
4.4.2	Biological Behavior of TIPS Scaffolds	81
4.4.3	Conclusions	83
4.5	Overall Trends in Biomimetic Scaffold Design	84
	References	85
5	<b>Bioactive Polymers and Nanobiomaterials</b>	
	<b>Composites for Bone Tissue Engineering</b>	91
	<i>Ferdous Khan and Sheikh Rafi Ahmad</i>	
5.1	Introduction	92
5.2	Design and Fabrication of Biomimetic 3D Polymer-Nanocomposites Scaffolds	93
5.2.1	Solvent Casting and Particulate Leaching	94
5.2.2	Melt Molding	94
5.2.3	Gas-Foaming Processes	95
5.2.4	Electrostatic Spinning	96
5.2.5	Microsphere Sintering	96
5.2.6	Rapid Prototyping	96
5.3	Nonbiodegradable Polymer and Nanocomposites	96
5.3.1	Polyethylene Nanocomposites	98
5.3.2	Polyamides Nanocomposites	99
5.3.3	Poly(ether ether ketone) (PEEK) Nanocomposites	100
5.3.4	Poly(methyl methacrylate) (PMMA) Nanocomposites	101
5.4	Biodegradable Polymer and Nanocomposites	102
5.4.1	Synthetic Biodegradable Polymers and Nanocomposites	103
5.4.1.1	Poly(Lactic Acid) Nanocomposites	103

5.4.1.2	Poly( $\epsilon$ -caprolactone) (PCL) Nanocomposites	107
5.4.1.3	Polyglycolide and Poly(lactide-co-glycolide) Nanocomposites	108
5.4.2	Natural Polysaccharide Nanocomposites	109
5.4.2.1	Chitin and Chitosan and Their Nanocomposites	109
5.4.2.2	Starch Nanocomposites	111
5.4.2.3	Cellulose Nanocomposites	111
5.5	Conclusions and Future Remarks	112

<b>6</b>	<b>Strategy for a Biomimetic Paradigm in Dental and Craniofacial Tissue Engineering</b>	<b>119</b>
	<i>Mona K. Marei, Naglaa B. Nagy, Mona S. Saad, Samer H. Zaky, Rania M. Elbackly, Ahmad M. Eweida and Mohamed A. Alkhodary</i>	
6.1	Introduction	120
6.2	Biomimetics: Definition and Historical Background	121
6.2.1	Definition	121
6.2.2	Concept of Duplicating Nature	122
6.2.3	Strategies to Achieve Biomimetic Engineering	122
6.2.3.1	Physical Properties	124
6.2.3.2	Specific Chemical Signals from Peptide Epitopes Contained in a Wide Variety of Extracellular Matrix Molecules	124
6.2.3.3	The Hierarchical Nanoscale Topography of Microenvironmental Adhesive Sites	125
6.3	Developmental Biology in Dental and Craniofacial Tissue Engineering: Biomimetics in Development and Growth (e.g. model of wound healing)	127
6.4	The Paradigm Shift in Tissue Engineering: Biomimetic Approaches to Stimulate Endogenous Repair and Regeneration	132
6.4.1	Harnessing Endogenous Repair via Mesenchymal Stem Cells	132
6.4.2	Inflammation, Angiogenesis and Tissue Repair	134

## x CONTENTS

6.4.3 Biomimetic Model of Nature's Response to Injury?	135
6.5 Extracellular Matrix Nano-Biomimetics for Craniofacial Tissue Engineering	136
6.5.1 Nanotechnology for Biomimetic Substrates	137
6.5.2 From Macro to Nano: Dentin-Pulp Organ Perspective	137
6.5.3 Nanotechnology for Engineering Craniofacial Mineralized Collagenous Structures	139
6.6 Biomimetic Surfaces, Implications for Dental and Craniofacial Regeneration; Biomaterial as Instructive Microenvironments	140
6.6.1 Biology of Osseointegration	141
6.6.2 Implant Surface Modification: Laser Micromachining and Biomimetic Coating	142
6.7 Angiogenesis, Vasculogenesis, and Inosculation for Life-Sustained Regenerative Therapy; The Platform for Biomimicry in Dental and Craniofacial Tissue Engineering	143
6.7.1 Vascularization to Reach Biomimicry; A Prerequisite for Life Sustained Regeneration	143
6.7.2 Patterns of Construct Vascularization	144
6.7.2.1 Angiogenesis	144
6.7.2.2 Vasculogenesis	145
6.7.2.3 Inosculation	146
6.7.3 Biomimicry to Reach Vascularization; Simulating a Vascularizing Milieu	147
6.7.3.1 Scaffold Properties	147
6.7.3.2 Growth Factor Incorporation	147
6.7.3.3 Coculture Techniques	148
6.7.3.4 Creating Vascular Patterns	148
6.7.3.5 Back to Nature	149
6.8 Conclusion	149
Acknowledgements	150
References	150

<b>7 Strategies to Prevent Bacterial Adhesion on Biomaterials</b>	<b>163</b>
<i>Indu Bajpai and Bikramjit Basu</i>	
7.1 Introduction	164
7.2 Characteristics of Prokaryotic Cells	166
7.2.1 Architecture of Bacterial Cell	168
7.2.2 Bacterial Growth Behavior <i>In Vitro</i>	170
7.2.3 Bacterial Adhesion and Biofilm Formation	171
7.2.4 Physicochemical Interactions between Bacteria and Surfaces	172
7.2.4.1 Factors Influencing Bacterial Adhesion	172
7.2.5 Synthetic Biomaterials with Microbial Resistance Property	174
7.2.5.1 Glass–Ceramics	175
7.2.5.2 HA-based Biocomposites with Bactericidal Property	177
7.2.5.3 Nanoparticles Treatment to Reduce Bacterial Infection	180
7.2.5.4 HA-based Magnetic Biocomposites	183
7.2.6 Influence of External Field on Bacterial Adhesion and Biofilm Growth	185
7.2.6.1 Electric Field	186
7.2.6.2 Magnetic Field	186
7.3 Summary	194
Acknowledgement	195
References	195
<b>8 Nanostructured Selenium – A Novel Biologically-Inspired Material for Antibacterial Medical Device Applications</b>	<b>203</b>
<i>Qi Wang and Thomas J. Webster</i>	
8.1 Bacterial Biofilm Infections on Implant Materials	204
8.2 Nanomaterials for Antibacterial Implant Applications	206
8.3 Selenium and Nanostructured Selenium	208
8.4 Selenium Nanoparticles for Antibacterial Applications	209

8.4.1	Antibacterial Properties of Selenium Compounds	209
8.4.2	Selenium Nanoparticles Inhibit <i>Staphylococcus Aureus</i> Growth	210
8.4.3	Selenium Nanoparticles for Preventing Biofilm Formation on Polycarbonate Medical Devices	212
8.4.4	Preventing Bacterial Growth on Paper Towels	212
8.5	Summary and Outlook	215
