

CONTENTS

1. Mechanics of Soft Tissues	1.1
2. Properties of Bone	2.1
3. Electromechanical Effects in Bone	3.1
4. Biomechanical Properties of Articular Cartilage	4.1
5. Lubrication of Diarthrodial Joints	5.1
6. Properties of Tendons and Ligaments	6.1
7. Muscle Mechanics	7.1
8. Noninvasive Blood Pressure Recording and the Genesis of Korotkoff Sound	8.1
9. Thermal Properties of Tissues	9.1
10. Mechanics of the Uterus in Pregnancy and Labor	10.1
11. Skin Mechanics	11.1
12. Properties of Red Blood Cells	12.1
13. Rheology of leukocytes	13.1
14. Rheology and Tube Flow of Blood	14.1
15. Mechanical Hemolysis	15.1
16. Static Elastic Properties of Blood Vessels	16.1
17. Models of Arterial System	17.1
18. Mechanics of Blood Flow in the Microcirculation	18.1
19. Interstitial Fluid Pressure and Lymph Flow	19.1
20. Network Models of Peripheral Circulation	20.1
21. fluid Mechanics in Atherosclerosis	21.1
22. Arterial Wall Oxygen Transport and its Relationship to Atherogenesis	22.1
23. Flow Through Collapsible Tubes	23.1
24. Elasticity of the Lung	24.1
25. Respiratory Control and Mechanics	25.1
26. Respiratory Gas Exchange	26.1
27. Artificial Lungs and Oxygenation Devices	27.1
28. Neural Conduction	28.1
29. Sensory Receptors	29.1
30. Cochlear Mechanics	30.1
31. Vestibular Mechanics	31.1
32. Computed Tomography and 3-D Imaging	32.1
33. Blood Pressure and Flow Measurements	33.1
34. Electrical Safety in Medicine	34.1
35. Stereology	35.1
36. Instrumentation for Pulmonary Function Tests	36.1

37. Theory and Design of Implantable Cardiac Pacemakers	37.1
38. Circulatory Assist Devices	38.1
39. The Artificial Kidney	39.1
40. Bioengineering of Total Joint Replacement	40.1
41. Biomechanics of the Human Spine and Trunk	41.1
Index Follows Chapter 41
