Part I Bioactive Ceramics and Metals

1 Introduction to Bioceramics	3
1.1 Bioactive Materials	3
1.1.1 Definitions	3
1.1.2 Common Biomaterials	4
1.1.3 Bioactive Ceramics	5
1.1.4 Biological Apatites	5
1.1.5 Basic Requirements for Bone Implants	6
1.1.6 Coating of Hydroxyapatite on Porous Ceramics	8
1.1.7 Biomaterials in Tissue Attachment	11
1.2 References	12
2 Bioactive Ceramics: Structure, Synthesis, and Mechanical Properties	13
2.1 Structure of Hydroxyapatite	14
2.1.1 General Structure and Chemistry of Hydroxyapatite	14
2.1.2 Structural Characteristics of Hydroxyapatite	15
2.1.3 Substituted Apatite	16
2.2 Synthesis of Hydroxyapatite Powder	19
2.2.1 Dry Chemical Methods	19
2.2.2 Wet Chemical Methods	20
2.3 Mechanical Properties of Hydroxyapatite	23
2.4 Other Bioceramics	25
2.4.1 Tricalcium Phosphate	25
2.4.2 Bioactive Glasses	25
2.5 References	26
2.6 Problems	28
3 Bioceramic Processing	29
3.1 Fabrication and Mechanical Properties of Porous Bioceramics	30

3.1.1	High Temperature Routes	30
3.1.2	Low Temperature Routes	32
3.1.3	Rapid Prototyping Techniques	33
3.1.4	Mechanical Properties of Porous Bioceramics	34
3.2	Coating of Bioceramic Thick Films on Bio-Inert Porous Substrates	34
3.2.1	Slip Casting	35
3.2.2	Electrophoretic Deposition	35
3.2.3	Bioceramic-Glass Slurry Method	36
3.2.4	Thermal Deposition	37
3.2.5	Sol-Gel Synthesis	37
3.2.6	Biomimetic Growth	39
3.3	Coating on Dense Substrates	39
3.3.1	Enameling	39
3.3.2	Plasma-Sprayed Coatings	40
3.3.3	Sputtering	41
3.4	Hydroxyapatite Coatings for Non-Hard Tissue Applications	42
3.5	Composites	43
3.5.1	Bioceramic-Polymer Composite	43
3.5.2	Reinforced Hydroxyapatite	44
3.5.3	Hydroxyapatite and Tricalcium Phosphate Composite	44
3.6	Summary	45
3.7	References	45
3.8	Problems	46
4	Coating of Hydroxyapatite onto Inner Pore Surfaces of the Reticulated Alumina	47
4.1	Hydroxyapatite Coating Methods and Characterization	47
4.1.1	Coating of Hydroxyapatite by the Hydroxyapatite-Glass Slurry Method	47
4.1.2	Coating of Hydroxyapatite by a Thermal Deposition Method	53
4.1.3	Characterization of Hydroxyapatite Film	53
4.1.4	Coating of Hydroxyapatite Using Sol-Gel Synthesis	57
4.2	Adhesion of Hydroxyapatite Film on Alumina Substrate	58
4.3	References	59
4.4	Problems	60
5	Properties and Characterization of Biomaterials	61
5.1	Characterization of Ceramics	61

5.2	Bioactive Properties and Hard Tissue Prosthetics	62
5.2.1	Bone Biology	62
5.2.2	Critical Issues on Interfaces Between the Hard Tissue and Biomaterials	63
5.2.3	Factors that Influence Bioreactivity	64
5.2.4	Bone Implant	64
5.2.5	Bonding Mechanisms	65
5.2.6	<i>In vitro</i> Behavior of Hydroxyapatite	66
5.3	Measurements of Growth and Dissolution of Hydroxyapatite Ceramics	68
5.4	<i>In vitro</i> Test Conducted in This Research	68
5.5	Mechanical Properties	70
5.6	References	71
5.7	Problems	73
6	Bioactivity of Hydroxyapatite	74
6.1	General Aspects	74
6.2	<i>In vitro</i> Testing Materials and Preparation	74
6.3	Characterization of Immersion Solution	75
6.4	Morphology of the Reacted Surfaces	79
6.5	References	84
6.6	Problems	84
7	Hydroxyapatite Deposition Mechanisms	85
7.1	Material Synthesis and Hydroxyapatite Coating	85
7.1.1	General Aspects on Chemistry, Structure, and Thermal Behavior of Hydroxyapatite	85
7.1.2	Material Synthesis and Hydroxyapatite Coating	86
7.1.3	Coating of Hydroxyapatite onto Inner Surfaces of Pores in Reticulated Alumina	87
7.1.4	Hydroxyapatite-Glass Slurry Method	87
7.1.5	Thermal Deposition and Sol-Gel Methods	90
7.2	Mechanisms of Bioactivity	92
7.2.1	<i>In vitro</i> Biochemistry Behavior of Hydroxyapatite	92
7.2.2	Growth — Dissolution Mechanism	94
7.2.3	Kinetics Models for Crystallization and Dissolution	96
7.2.4	Experimental Determination of Reaction Mechanisms	99
7.2.5	Effect of Heat Treatment on Hydroxyapatite	100
7.2.6	Structural Effect on Bioactivity	102
7.2.7	Temperature Effect on Bioactivity	103
7.2.8	Factors Contributing to Reactivity of Hydroxyapatite	105

7.3	References	108
7.4	Problems	108
8	Biomedical Metallic Materials	110
8.1	Microstructures and Processing	110
8.2	Corrosion Resistance of Metals	115
8.3	Biological Tolerance of Metal	117
8.4	Stainless Steel	118
8.5	Cobalt-Based Alloys	123
8.6	Titanium and Its Alloys	127
8.7	TiNi Shape Memory Alloy	131
8.8	Summary	135
8.9	References	137
8.10	Problems	138

Part II Polymeric Biomaterials

9	Polymer Basics	143
9.1	Classification of Polymers	143
9.1.1	Source	143
9.1.2	Polymer Chain Structure	144
9.1.3	Polymer Thermal Behavior	146
9.1.4	Polymer Stability	146
9.2	Characteristics of Polymer	147
9.2.1	Degree of Polymerization	147
9.2.2	Polymer Crystals	148
9.2.3	The Glass Transition Temperature and Melting Temperature	148
9.3	Synthesis of Polymers	149
9.3.1	Free Radical Polymerization	149
9.3.2	Condensation Polymerization	153
9.3.3	Other Types of Polymerization	154
9.4	References	156
9.5	Problems	157
10	Naturally Occurring Polymer Biomaterials	158
10.1	General Introduction to Proteins	158
10.2	Collagen	159
10.2.1	Cross-Linking of Collagen	162
10.3	Alginate	166

10.4	Chitin and Chitosan	167
10.5	References	168
10.6	Problems	171
11	Synthetic Non-Biodegradable Polymers	172
11.1	Polyethylene	172
11.1.1	High Density Polyethylene	173
11.1.2	Ultrahigh Molecular Weight Polyethylene	174
11.2	Poly(methyl methacrylate)	175
11.3	Polyester	177
11.4	Polycarbonate	178
11.5	Polyamides	179
11.6	Polyurethane	180
11.7	Polysulfones	184
11.8	Poly(ether ether ketone)	184
11.9	References	185
11.10	Problems	186
12	Synthetic Biodegradable Polymers	187
12.1	Aliphatic Polyester	187
12.1.1	Poly(glycolide)	189
12.1.2	Poly(lactide)	189
12.1.3	Poly(lactide-co-glycolide)	191
12.1.4	Poly(ϵ -caprolactone)	192
12.1.5	Poly(para-dioxanone)	192
12.2	Poly(propylene fumarate)	193
12.3	Polyamino Acid	194
12.4	References	195
12.5	Problems	196
13	Polymer Matrix Composite Biomaterials	197
13.1	Fiber Reinforced Composites	198
13.2	Filler Reinforced Composites	199
13.3	Methods to Improve the Interfacial Bonding Between Phases in Composites	200
13.3.1	Self-Reinforcement of Fiber/Polymer Composites	200
13.3.2	Plasma Treatment of Fibers	200
13.3.3	Coupling Agent	201
13.4	References	203
13.5	Problems	206

Part III Tissue Engineering: A New Era of Regenerative Medicine

14	Biomaterials for Tissue Engineering	211
14.1	General Aspects of Biomaterials Used for Tissue Engineering	211
14.2	Representative Biomaterials Used for Tissue Engineering ...	212
14.2.1	Polymers	212
14.2.2	Bioceramics	213
14.3	Biomaterial Constructs for Tissue Engineering; Scaffolds ...	214
14.3.1	Definition and Requirements for Scaffolds Used in Tissue Engineering	215
14.3.2	Principles of Scaffold Design	215
14.3.3	Scaffold Fabrication Technologies	216
14.4	References	223
14.5	Problems	226
15	Cells and Biomolecules for Tissue Engineering	227
15.1	Cells for Tissue Engineering	227
15.2	Growth Factor Delivery in Tissue Engineering	230
15.3	Regulatory Matrix Proteins	232
15.4	References	234
15.5	Problems	237
16	Transport and Vascularization in Tissue Engineering	238
16.1	Transport in Engineered Tissue	238
16.2	Vascularization	239
16.2.1	New Blood Vessel Formation	239
16.2.2	Vascularization in Tissue Engineering	240
16.3	References	240
16.4	Problems	241
17	Host Response to Tissue Engineered Grafts	243
17.1	The Foreign Body Response to Synthetic Components	243
17.2	Response to Biological Components	244
17.3	References	246
17.4	Problems	247

18 Other Important Issues and Future Challenges in Tissue Engineering	249
18.1 Organ Replacement and Regeneration	249
18.2 Organotypic and Histiotypic Models	250
18.3 Mechanotransduction	251
18.4 Future Challenges	252
18.5 References	253
18.6 Problems	253
