

## CONTENTS

## TOPICAL REVIEWS

1. Polymers in Pharmaceutical Products	2
2. Tissue Engineering Using Synthetic Biodegradable Polymers	16
3. Interfacial Biocompatibility	35
4. Polymeric Devices for Transcutaneous and Percutaneous Transport	49
5. Microcellular Foams	58

SYNTHESIS, SURFACE ACTIVATION, AND CHARACTERIZATION  
OF BIOMATERIALS

6. Surface Biolization by Grafting Polymerizable Biactive Chemicals	66
7. Hydrophilic, Lipid-Resistant Fluorosiloxanes	76
8. Synthesis of Poly (ether urethane amide) Segmented Elastomers	87
9. Interaction of Water with Polyurethanes Containing Hydrophilic Block Copolymer Soft Segments	103
10. Formation and Reactivity of Surface Phosphorylated Thermoplastic Polymers	116
11. Surface Modification of Polymeric Biomaterials with Poly(ethylene oxide): A Steric Repulsion Approach	135
12. Ascorbic Acid as an Etchant-Conditioner for Resin Bonding to Dentin	147
13. Salt Partitioning in Polyelectrolyte Gel-Solution Systems	157
14. Ring-Opening Polymerization of a 2-Methylene Spiro Orthocarbonate Bearing a Pendant Methacrylate Group	171
15. Ring-Opening Dental Resin Systems Based on Cyclic Acetals	184
16. Synthesis of Novel Hydrophilic and Hydrophobic Multifunctional Acrylic Monomers	191
17. Effect of Structure on Properties of Absorbable Oxalate Polymers	202
18. Fluorescent Cure Monitoring of Dental Resins	210

BIOLOGICAL EFFECTS RELATED TO SPECIFIC  
PHYSICOCHEMICAL FACTORS

19. Activation of Leukocytes by Arg-Gly-Asp-Ser-Carrying Microspheres	220
20. Poly(vinyl alcohol) Hydrogels Prepared under Different Annealing Conditions and Their Interactions with Blood Components	228
21. Phase Transition's Control of Collagenous Tissue Growth and Resorption Including Bone Morphogenesis	243
22. pH-Sensitive Hydrogels Based on Hydroxyethyl Methacrylate and Poly(vinyl alcohol) Methacrylate	251
23. Kinetic Model for Degradation of Starch-plastic Blends with Controlled-Release Potential	258
24. Cross-Linking and Biodegradation of Native and Denatured Collagen	275

SYNTHETIC BIOACTIVE CHAIN MOLECULES  
AND POLYMERS FOR CONTROLLED TRANSPORT

## OF BIOACTIVE AGENTS

25. Poly (methacrylic acid) Hydrogels as Carriers of Bacterial Exotoxins in an Oral Vaccine for Cattle	288
26. Dye-Grafted, Poly (ethylene imine) Coated, Formed-in-Place Class Affinity membranes for Selective Separation of Proteins	297
27. Preparation of Insulin-Releasing Chinese Hamster Ovary Cell by Transfection of Human Insulin Gene: Its Implantation into Diabetic Mice	306
28. pH and Ionic-Strength-Dependent Permeation through Poly(L-lysine-alt-terephthalic acid) Microcapsule Membranes	314
