

CONTENTS

Section 1. Chemistry, Nomenclature, and Analyses	
Chapter 1.1	
Lipids in Foods: Chemistry and Nomenclature	3
Chapter 1.2	
Analytical Methodologies for Lipids in Foods	13
Chapter 1.3	
Analytical Procedures for Measurement of the Lipids and Lipoproteins in Cardiovascular Risk Assessment	21
Chapter 2.1	
Effects of Dietary Fatty Acids and Cholesterol on Cardiovascular Disease Risk Factors in Man	41
Chapter 2.2	
Omega-3 Fatty Acids. Part I: Metabolic Effects of Omega-3 Fatty Acids And Essentiality	51
Chapter 2.3	
Omega-3 Fatty Acids. Past II: Epidemiological Aspects of Omega-3 Fatty	75
Chapter 2.4	
Trans Fatty Acids	91
Chapter 2.5	
Plant Sterols: Their Biological Effects in Humans	101
Chapter 2.6	
Saponins in the Treatment of Hypercholesterolemia	107
Chapter 2.7	
Food Lipids and Thermogenesis in Relation to Obesity	113
Chapter 2.8	
Dietary Lipids and Colon Cancer	129
Introduction	136
Chapter 3.1	
Almonds, Walnuts, and Serum Lipids	137
Chapter 3.2	
Nut Consumption and Coronary Heart Disease Risk	145
Chapter 3.3	
Olive Oil and Health	153
Chapter 3.4	
Modified LDL in the Pathogenesis of Atherosclerosis: Role of Nutrition	155
Chapter 3.5	

Short Chain Fatty Acid Production and Possible Metabolic Consequences in Humans	163
Chapter 3.6	
Effect of Dietary Fiber on Plasma Lipoproteins	173
Appendix I	
Polyunsaturated, Monounsaturated, and Saturated Fats in Some Common Foods	201
Appendix II	
Physical Properties of Fatty Acids	205
Appendix III	
Cholesterol in Some Common Animal Foods	207
Appendix IV	
Plant Sterols in Foods	209
Appendix V	
Definitions and Composition of Various Olive Oils	217
Appendix VI	
A Note on Proposed Technologies for Extracting Cholesterol from Food	221
Index	227
