

CONTENTS

Chapter 1 Chemical and Physicochemical modification of Lipids	1
Chapter 2 Enzymatic Synthesis of structured Modified Fats	20
Chapter 3 Synthesis of Positional Isomers of Structured Lipids with Lipases as Biocatalysts	46
Chapter 4 High-Level Processing of Polyunsaturated Fatty Acid-Containing Oil with Lipase	73
Chapter 5 Salatrim: A Family of Reduced-Calorie Structured Lipids	89
Chapter 6 Structured Lipids: Evidence Evolving for Widespread Use	117
Chapter 7 Dilinoleoyl-mono- γ -linolenin (DLMG) and Di- γ -linolenoly-monolinolein (DGML): Naturally Occurring Structured Triacylglycerols in Evening Primrose Oil	121
Chapter 8 Effect of Dietary Oils Enriched in Dilinoleoyl Mono- γ -Linolenin (DLMG) on the Total Lipid n-6 Fatty Acid Composition of Human Tumors Grown in Nude Mice	129
Chapter 9 Metabolism and Physiological Effects of Dietary Fats in Relation to Their Structure	139
Chapter 10 The Influence of Stereospecific Saturated Fatty Acids in Dietary Triacylglycerols on Lipoprotein Metabolism	149
Chapter 11 Metabolism of Specific Structured Triacylglycerols	160
Chapter 12 Fatty Acid Modulation of Lipoprotein Turnover and Hepatic mRNA Abundance	170
Chapter 13 Triglyceride Structure and Atherosclerosis	183
Chapter 14 Structured Triglycerides and Their Medical Applications	189
Chapter 15 Clinical Experience with a Structured Lipid Emulsion in Patients with Liver Failure	197
Chapter 16 Lipid Structures and the Intravenous Metabolism of Triglyceride-Rich Lipoproteins And Emulsions	207
Chapter 17 Clinical Testing of Structured Lipids	229
Index	239
