

## CONTENTS

1 Hormones and the Transport of Nutrients across Cell membranes	1
2 Biological Action of Thyroid Hormones at the Cellular and Molecular Levels	58
3 Interactions of Thyroid Hormone and Enzyme Systems in Vitro	132
4 Thyroid Hormones and Protein Synthesis	154
5 Effects of Thyroid Hormones on Lipid Metabolism	162
6 Gonadotropic Hormones and End Site Metabolism	172
7 Action of Steroid Hormones on Glutamic Dehydrogenase	209
8 Studies on the Mechanism of Cortisone Action	218
9 Adaptive Changes in Enzymatic Activity Induced by Glucocorticoids	234
10 Disposition and Metabolic Fate of Catecholamine Hormones	257
11 Actions of Adrenalin and Noradrenalin on Metabolic Systems	268
12 Actions of Catecholamines at the Molecular Level	320
13 The Stomach and Duodenum: Gostrin and the Duodenal Hormones	336
14 Action of Insulin on Carbohydrate Metabolism	360
15 Insulin and Lipid Metabolism	382
16 Insulin and Protein Biosynthesis	422
17 Mode of Action of Androgens and Gonadotropins	470
18 Sex Hormones and Hydrogen Transport by Isolated Enzyme Systems	482
19 Sex Hormones and the Metaabolism of Amino Acids and Proteins	509
Index	561
