## 612.87 REC V.1

## CONTENTS

| PAF | RT I Biochemical Events in Taste Reception and Transudation                              |     |
|-----|--|-----|
| 1.  | Stimulus-Evoked Transepithelial Lingual Currents and the Gustatory Neural Response:      |     |
|     | Implications for Transduction and Adaptation   | 13  |
| 2.  | Receptor Site Specificity in Taste: Characterization of Amino Acid Taste Receptors from  |     |
|     | The Cutaneous Taste System of Ictalurus punctatus  | 35  |
| 3.  | Chemical Stimulus Discrimination by Specific and Nonspecific Receptor Mechanisms and     |     |
|     | Their Transduction Sequences   | 55  |
| 4.  | Second-Messenger Events in Taste   | 85  |
| PAF | RT II Ionic Mechanisms of Taste Cell Activation  |     |
| 5.  | Ionic Mechanisms of the Resting Potential and Quinine-Induced Receptor Potential in Frog | 5   |
|     | Taste Cells  | 115 |
| 6.  | Ion Cannels and Taste Transduction   | 137 |
| 7.  | Ionic Currents in Taste Cells and reconstituted Taste Epithelial Membranes               | 151 |
| 8.  | Chemoreception of Salt Taste: The Blockage of Stationary Sodium Currents by              |     |
|     | Amiloride in Isolated Receptor Cells and Excised Membrane Patches                        | 171 |
| 9.  | Mechanism of Sour Taste Transduction in Mudpuppy Taste Cells                             | 183 |
| PAF | RT III Biochemical Events in Olfactory Reception and Transudation                        |     |
| 10. | Structure Activity Studies and Characterization of an Odorant-Binding Protein            | 207 |
| 11. | Odorant-Binding Protein: Sequence Analysis and Localization Suggest an Odorant           |     |
|     | Transport Function   | 227 |
| 12. | Biochemistry of Purinergic Olfaction: The Importance of Nucleotide Dephosphoryation      | 243 |
| 13. | Receptor-Activated Chemosensosry Enzyme Cascade  | 283 |
| 14. | Second-Messenger Signalling Mechanisms in Olfaction                                      | 299 |
| PAF | RT IVA Ionic Mechanisms of Olfactory Transduction  |     |
| 15. | A Role for cyclic AMP in Olfactory Transduction  | 311 |
| 16. | Cyclic Nucleotide-Gated Electricla Activity in Olfactory Receptor Cells                  | 319 |
| 17. | Excitation by Odorants of Olfactory Receptor Cell: Molecular Interactions at the Ciliary |     |
|     | Membrane   | 347 |
| 18. | Stimulus-Driven Chemosensory Membrane Channels on Crayfish Sensory Cells                 | 363 |
| 19. | Activation of Lobster Olfactory Receptor Cells by Complex Stimuli: Evidence for          |     |
|     | Multiple Conductance Pathways  | 389 |
| PAF | RT IVB Ionic Mechanisms of Olfactory Transduction  |     |
| 20. | Odor Detection and Discrimination: Can Isolated Olfactory Receptor Neurons Smell?        | 415 |
| 21. | Channel Activities in In Vivo and Isolated Olfactory Receptor Cells                      | 427 |
| 22. | Ionic Mechanisms Underlying the Olfactory Response                                       | 449 |
| 23. | Voltage and Cyclic Nucleotide-Gated Currents in Isolated Olfactory Receptor Cells        | 469 |
| PAF | RT V Conclusion  |     |

## 24. Summation of the Conference
