

CONTENTS

1. Introduction	1
2. The properties of water	5
3. The proteins	10
4. Carbohydrates	26
5. Lipids	32
6. Nucleotides, nucleic acids and the cell	41
7. Food, energy and nutrition	52
8. Mouth, esophagus and swallowing	85
9. The stomach	92
10. Digestion and absorption in the intestine	114
11. Biochemical reactions	137
12. Enzymes	143
13. Glycolysis and the tricarboxylic acid cycle	160
14. Biological oxidation	171
15. Carbohydrate metabolism: organization and control	178
16. Lipid metabolism	189
17. Metabolism of nucleic acids and nucleotides	202
18. Protein synthesis	214
19. Metabolism of proteins and amino acids	221
20. Hepatic and biliary function	232
21. Blood pigments	239
22. The blood	246
23. Immunity and the defence mechanisms against foreign substances	264
24. The heart	275
25. The circulation	324
26. Vasomotor control	341
27. Respiration	355
28. Pulmonary circulation and gas transport	371
29. The kidney	393
30. Water, electrolyte and acid-base	415
31. Connective tissue and skin	424
32. Bone and the metabolism of calcium and phosphorus	431
33. Nervous system	441
34. Neurone and synapse	449
35. Sensation	482
36. Spinal reflexes	494
37. Muscle and exercise	505

38. Postural reflexes	524
39. Somatosensory cortex, the cerebellum and the control of movement	536
40. Control of visceral function	548
41. Special senses	571
42. Speech and the higher functions of the brain	611
43. The endocrine glands	620
44. Reproduction	642
45. Growth and development	672
46. Involution and senescence	679
47. Chromosomes and heredity	682
Appendices	692
Index	699
