613.62 ATH

CONTENTS

SECTION 1: ORIENTATION

1 Introduction to Human Safety 3

2 An Input-Output Model for Human Safety 7

SECTION 2: DEFENCE PROCESSES

3 Inhalation, Respiratory Defensive Processes and the Measurement of Aerosols 25

4 Defensive Cells 56

5 Inflammatory Response and Immune Response 68

6 Stress Responses and Resistance and Homeostasis 76

7 Thermoregulation 85

8 Metabolic Transformation and Conjugation; Toxicity and Pathogenically 96

SECTION 3: NORMAL BIOLOGICAL PROCESSES

9 Growth 109

10 Genetics of the Cell 118

11 Transport Systems: input Distribution and Storage and Bio-dumping 130

SECTION 4: MODES OF ACTION PATHOLOGICAL PROCESSES AND DISEASE FOLLOWING HARMFUL INPUTS

12 Dose Effects Quantitative Relations and Target Organs 147

13 Inflammation as a Harmful Process 162

14 Altered Sensitivity 173

15 Disorders of Repair 187

16 Disorders of Growth 200

SECTION 5: CASE HISTORIES AND EXAMPLES

17 Radiating Energies 231

18 Aromatic Amines and Occupational Cancer of the Renal Tract 259

19 Metals in the Disservice of Man 274

20 Asbestos 290

21 Case Study: Respiratory Disease in the Coal Industry 303

22 Gassing Accidents 328

23 Case History of Vinyl Chloride 344

SECTION 6: STRATEGIES

24 Strategies in Occupational Health and Safety 371

Index 399
